

# T-grid linear light installation manual

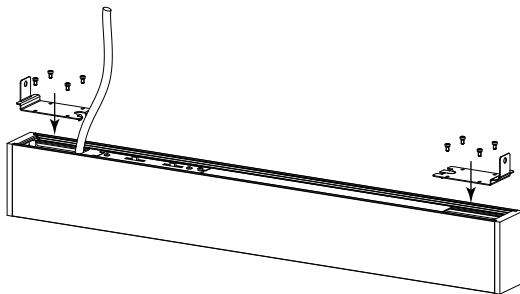

## NOTE:

- 1 Read instructions carefully before installation.
- 2 Install by a qualified electrician.
- 3 Make sure the power is OFF before starting installation or attempting any maintenance.
- 4 Application space is with no chemical compositions such as sulphur, acid, halogen etc.

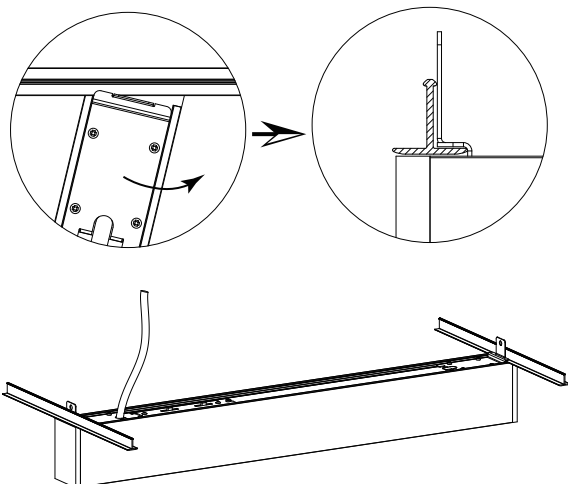

**STEP 1** Remove the plastic covers at both ends of the luminaire back.

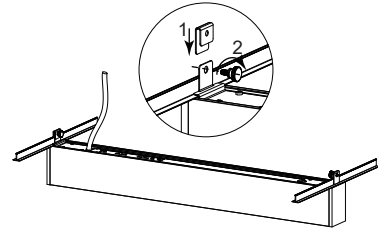

**STEP 2** Take out the hook brackets from the accessory package and use screws to install the hook brackets on the back of the luminaire.

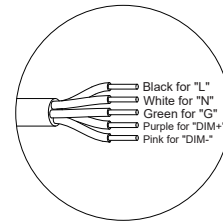

**STEP 3** Install the luminaire on the ceiling grid.

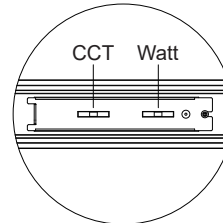

**STEP 4** Take out the hook bracket clip and the hand-tightening screws from the accessory package, and install them on the luminaire hook bracket.

**STEP 5** Use the wire connector to connect the L (black), N (white), and G (yellow/green) wires in the junction box to the corresponding colored wires of the power line of the luminaire, and make sure they are securely fixed.

**STEP 6** Press the dip switch on the back of the luminaire to select the desired color temperature and lamp power.

**STEP 7** Cover the gypsum board to complete the installation. (The gypsum board may need to have some edges and corners cut off to avoid power lines and installation brackets.)
