

## The Radical Clean Solutions.

Virtually all air cleaning devices require that the contaminated air pass through their device. This is not the case with the RCS devices. Our devices send out atmospheric hydroxyls to seek out, attach to, either pathogens or VOC, and then neutralize them. There is no harm ever to people, pets, plants, or materials. In mimicking the natural outdoor atmospheric hydroxyl, we are deploying nature's green cleaning agent into our sealed HVAC environment. You can expect to sleep soundly, live in a richly oxygenated environment, and be assured that you and your family are living in a safe and protected environment.

### HVAC in duct Retro-Fit System

Designed to easily install at the manifold of the HVAC duct system enabling the Radical unit to disperse Hydroxyl Radicals throughout all areas served by the air conditioning or heating system. The installation takes only minutes, plugs in for easy connection and operates simultaneously with the air handling system in your home, office, industrial facility, etc. creating an "immune system for your environment"™

### Portable Hydroxyl Unit

Designed for offices, homes or spaces that do not have HVAC systems or areas not covered by such systems. Simply plug in your Radical unit and our system continuously produces and disperses hydroxyl radicals to effectuate a germ and pathogen free "immune system for your environment"™
