CMMC Compliance

A CMMC Solution for All

The New Cybersecurity Standard for Contractors

As of November 2025, organizations that receive a contract from the Department of Defense (DoD/DoW) need to be CMMC (Cybersecurity Maturity Model Certification) compliant to avoid losing government contracts. CMMC is a standardized set of cybersecurity requirements designed to ensure that sensitive government information—like blueprints or contract details—stays protected from hackers and foreign threats. If you want to bid on or keep DoD contracts, getting CMMC compliant will soon be mandatory and you'll need to be prepared.

For the past 20+ years SecurityMetrics has developed a suite of solutions and products that have been used by large entities to track the cybersecurity compliance of over 500,000 small businesses. Using our extensive experience, we've created a suite of CMMC solutions designed to make compliance validation simple and accessible. As part of our Security Framework Platform, our automated tools allow Level 1's to complete a CMMC self assessment and our groundbreaking compliance portal helps Primes and mid-tier contractors verify and track compliance for their entire subcontractor network. Additionally, we offer professional services to Level 2 contractors to help with preparation and certification of CMMC compliance.

Connecting DoD Contractors Using Our Comprehensive Database

SecurityMetrics has one of the most complete compliance databases available on the market. Primes and mid-tier contractors can now easily gather validated CMMC compliance information for all of their subcontractors in one place. Meeting flow-down requirements is now achievable with significantly less resources and in a fraction of the time.

Our portal allows you to collect and track CMMC compliance information with hundreds of thousands of active DoD/DoW subcontractors available in the database. This database can then be used by individual subcontractors to display their CMMC compliance status. For primes, it allows you to create a custom subcontractor network to monitor and fulfill their requirements to track flowdown compliance. You can also create recurring reports of any specific contractors you need compliance information on and invite subs to report their compliance directly with SecurityMetrics.

Our services include a U.S.-based live support team to communicate with customers and help both primes and contractors gather and report compliance into the ecosystem.

Primes · Level 1 · Level 2 · Security Framework Platform

securitymetrics®
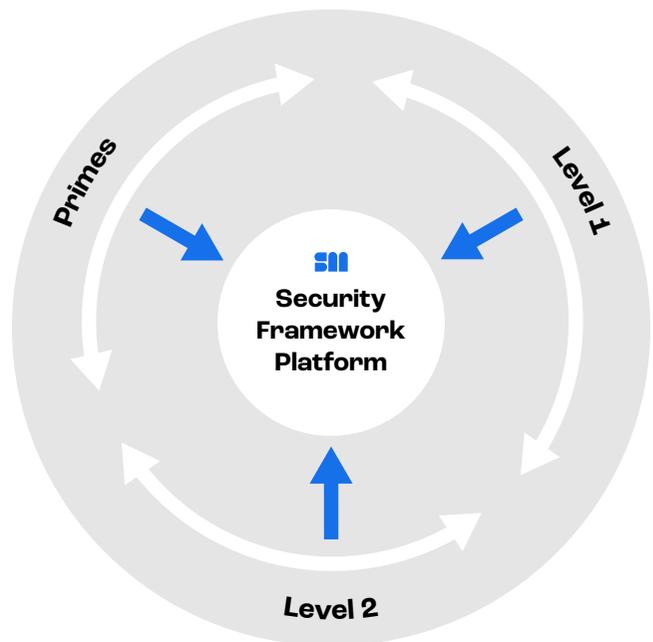

Primes–Map Your Entire Contractor Network

Primes of all sizes can fully manage their entire flow-down of subcontractors in one, easy-to-navigate place. No more tracking down subs one by one to check their CMMC status. You'll know where they're at in their CMMC journey, what steps are next, and get reports on their progress.

Our automated solutions will minimize lengthy conversations about compliance and simplify interactions with individual contractors. Get real-time validation updates from subcontractors via compliance progress bars and actionable next steps. As soon as any subcontractor in your downline has completed their CMMC verification, that status will be immediately available for compliance reporting.

Level 2 Contractors– Get Expert CMMC Guidance from a Certified RPO

If you are a Level 2 contractor and have already completed your C3PAO assessment, you can add your compliance information into our system for no cost and easily advertise your accomplishment and allow prime contractors to simply include your status in their flow-down tracking. No need to report multiple times to primes anymore.

For Level 2 contractors who require more in-depth guidance through CMMC, SecurityMetrics offers a hands-on, detailed approach to the full set of CMMC controls with the expert guidance of a certified RPO (Registered Provider Organization). Get a complete gap analysis or mock assessment and ensure your company leaves no stone unturned with the help of our CMMC team.

Level 1 Contractors–Simplified Compliance with the Self-Assessment Portal

For Level 1 contractors, we provide a smooth and simple process that guides you through each control in our CMMC self assessment in easy-to-understand terms. Policy templates and live help further enhance your compliance experience. Once completed you can report and affirm your compliance in the DoD/DoW official Supplier Performance Risk System (SPRS) website.

In addition, we've made annual CMMC compliance simple with yearly check-ins and updates. No need to readdress each step of the process, just answer a few easy questions about your business and you're good to go.
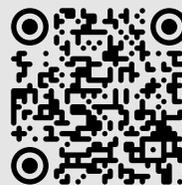

Over 25 Years of Compliance Experience

SecurityMetrics has over 25 years of compliance expertise, including NIST SP 800-171 guidance, which CMMC is primarily based on. We've worked hand-in-hand with leaders in every major industry and worked with businesses of all sizes. Our team is more than equipped to understand and help you with the rigorous requirements for full CMMC compliance enabling you to focus on your contribution to the Defense Industrial Base.

About SecurityMetrics

SecurityMetrics secures peace of mind for organizations that handle sensitive data. From local shops to some of the world's largest brands, SecurityMetrics helps businesses achieve data security with penetration testing, vulnerability scanning, gap analysis, security consulting, managed services and compliance mandates (PCI, CMMC, HIPAA, GDPR, HITRUST).

SecurityMetrics is a PCI certified Approved Scanning Vendor (ASV), Certified Registered Provider Organization (RPO), Qualified Security Assessor (QSA), Certified Forensic Investigator (PFI), and Managed Security provider with over 25 years of data security experience. They have tested over 1 million systems for data security and compliance. They are privately held and headquartered in Orem, Utah, where they maintain a Security Operations Center (SOC) and 24/7 multilingual technical support.
