

Mitigating Disruption

Minimizing disruption & maximizing results

The risk of disruption from migrating applications to the cloud can come from multiple angles. And the thought of the potential consequences alone is enough to trigger second thoughts.

Should you stick with what you know, renew the lease on physical infrastructure and continue to slog through the maintenance? Or should you make the leap to the cloud and potentially find yourself dealing with deployment delays, budget overruns, and other obstacles?

The what-if scenarios include the threat of spiraling costs if infrastructure isn't compatible or properly managed. If you don't have the in-house expertise or adequate strategies to take care of the

migration, application development, and optimization, you can easily run into mounting problems.

Even if you're confident in your approach, a lack of ownership internally can cause miscommunication between the business and cloud provider, in turn leading to preventable mistakes.

It's a dilemma of staying put and failing to make progress towards the future or trying to move forward but standing in the face of possible failure.

CloudCatalyst: migrate quickly without costly mistakes

With Atos and AWS, migrating your workloads to the cloud doesn't have to feel like a leap of faith.

You can land firmly on your feet by leveraging Landing Zone – a solution that offers a standardized approach to cloud migration to ensure you're meeting best practices, all while enhancing security, compliance and operational efficiency every step of the way.

Guiding you throughout by leveraging our extensive experience, we identify unexpected obstacles, so that the cloud cuts your costs, rather than raises them.

Atos also offers funding programs to strip away the upfront financial barriers from transitioning.

Once you've embarked on your cloud journey with us, our comprehensive managed services wrapper ensures you're never left in the dark or at risk of disruption. You get ongoing support and maintenance post-migration, as well as the same reliable team in place to keep operations running seamlessly.

In Day-2 ops, Atos works with AWS to further reduce your running costs by leveraging their native services alongside Atos's expertise.

With the training and know-how to help your organization navigate the transition and downtime diminished, there's no question about whether it's worth migrating workloads. The road to greater flexibility and streamlined operations is just around the corner.
