

MUSTY, MOLDY CRAWL SPACE?

Deter mold, high humidity, and wood rot in the crawl space. Protect your home and improve the air you breathe with full crawl space encapsulation.

FULL ENCAPSULATION

Keeping Homes Dry & Stable Since 1994

- Crawl space encapsulation liner
- Optional encapsulation drainage matting
- Spray foam, sealants, encap tape
- Various size dehumidifiers
- Airtight crawl space door

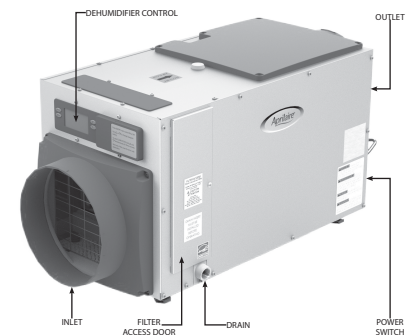

How Moisture Enters the Crawl Space

- Moisture rising from crawl space dirt floor
- Water intrusion (cracks in concrete block)
- Lack of ventilation for appliances (dryers)
- Plumbing leaks, AC condensation
- High humidity (moisture in the air)

Crawl Space Encapsulation

Unlike a standard vapor barrier, our heavier vinyl encapsulation material protects the crawl space from any rising damp from the crawl space dirt floor. The encapsulation liner is sealed up the walls to the ceiling. Vents and other holes are spray foamed as needed to seal off and reduce moisture from further infiltrating the crawl space. Protecting the crawl space from humidity reduces the susceptibility to wood rot, microbial growth like mold, mildew, and fungi, as well as pests and other risks threatening the structural integrity of the home. Combine with mold treatment, waterproofing, and a dehumidifier for best results.

The Dehumidifier

The dehumidifier reduces moisture conditions critical for mold, pests, and musty odors to thrive, making the air cleaner, healthier, and more comfortable in the crawl space. When combined with full encapsulation, it is the most effective way to attain and maintain a dry crawl space.

The USS Difference

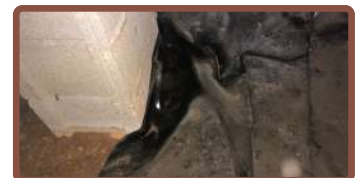

- Deter mold, mildew, pests, and wood decay
- Deter dampness, efflorescence, and musty smells
- Improve the air you breathe in your home
- Protect your home with a lifetime liner warranty
- Customized solutions designed for your home
- No hidden clauses. No fine print.
- Free estimates. No hassle. No obligation.
- More experience. More satisfied customers.
- We Guarantee Our Best!

Crawl Space Door

An airtight, waterproof crawl space door paired with an encapsulation helps prevent moisture from entering the crawl space.

Vapor Barrier

Vapor barriers are not sealed and lie directly on the dirt floor, proving less effective in moisture control than a fully encapsulated crawl space.
