

GRANT FUNDING IN ACTION!

The Synopsys Outreach Foundation generously awarded a STEM grant to Bay Area Child Care!

This grant invited us to explore STEM opportunities with our students and continue to expand the learning and imagination that they carry! Our center teachers observed that across all sites, the students showed a fascination for building—from our early learners to our older elementary students, building with all sorts of loose parts was something that intrigued them. Through our grant, we were able to purchase light table panels and additional loose parts materials to enhance and support the students' curiosities. This extension of learning opens up science, technology, engineering, and math skills.

STEM EXPLORATION

Our embedded STEM opportunities will continue to evolve, layered alongside materials purchased through this grant, as well as ongoing investigations and provocations!
