This ETF is an alternative mutual fund, as such, MSTU is permitted to invest in asset classes or use investment strategies that are not permitted for other types of mutual funds. In addition, the ETF is concentrated and non-diversified, meaning it is only exposed to a single common stock. As a result, the ETF's assets are more susceptible to the impact of any specific company event, or single economic, technological, or regulatory event, compared to a diversified portfolio.

This ETF is highly speculative. MSTU uses a significant amount of leverage which magnifies gains and losses. It is intended for use in daily or short-term trading strategies by very knowledgeable, sophisticated investors. If you hold this ETF for more than one day, your return could vary considerably from the ETF's daily target return. For example, you could lose your entire investment in one day if the underlying index of the ETF experiences a single-day price movement that is greater than 50%. The negative effect of compounding on returns is more pronounced when combined with leverage and daily rebalancing in volatile markets. MSTU is not suitable for investors who do not intend to actively monitor and manage their investments.
