## Portfolio Strategy

The MegaShort (-3X) US Semiconductors Daily Leveraged Alternative ETF seeks to replicate three times inverse (-3X) the daily performance of the Solactive US Semiconductor 30 Capped Index, which is calculated in U.S. dollars, before fees and expenses. SOXD does not hedge its currency exposure to the U.S. dollar.

## Index Information

The Solactive US Semiconductor 30 Capped Index is a stock market index tracking the total return of largest 30 securities in the semiconductors industry listed on stock exchanges in the United States. The index is rebalanced quarterly.

## Fund Performance

This ETF is an alternative mutual fund, as such, SOXD is permitted to invest in asset classes or use investment strategies that are not permitted for other types of mutual funds.

This ETF is highly speculative. SOXD uses a significant amount of leverage which magnifies gains and losses. It is intended for use in daily or short-term trading strategies by very knowledgeable, sophisticated investors. If you hold this ETF for more than one day, your return could vary considerably from the ETF's daily target return. For example, you could lose your entire investment in one day if the underlying index of the ETF experiences a single-day price movement that is greater than 33%. The negative effect of compounding on returns is more pronounced when combined with leverage and daily rebalancing in volatile markets. SOXD is not suitable for investors who do not intend to actively monitor and manage their investments.
