FEATURES & BENEFITS

- SeaCure-Cal is a weak carbon based organic acid complex and cofactor that is highly effective in the reduction of chemical bonding in soil and water. With low application rates, the normal risks associated with acid is eliminated.
- SeaCure-Cal will provide two reactions in soils. Lime reacts with the organic acid component to form Calcium Glycolate, which is 5 times more soluble than Gypsum. Thus, a reaction with SeaCure-Cal will provide Calcium that is 5 times more available for nutrient use or in an exchange reaction. Additional ion reactions free up other available nutrients: Nitrate, Phosphate, Potassium, Zinc, and Iron.
- SeaCure-Cal will boost the availability of the good salts like calcium and magnesium while improving the solubility and leaching of bad salts such as carbonates and sodium.
- SeaCure-Cal should be used monthly until sodium and competitive salts are reduced. Frequency can be increased at start-up and monitored for best results.
