

HERBICIDE

CONTAINS HALOSULFURON-METHYL, THE ACTIVE INGREDIENT USED IN PERMIT®

UNBEATABLE NUTSEGE CONTROL AND CROP SAFETY

Promote™ is a selective herbicide aimed at controlling nutsedge without the damaging effects that other herbicides leave behind. Promote also provides outstanding post-emergence control of tough broadleaf weeds that rob crops of vital nutrients. Promote's extended residual control protects crops from troublesome weeds so they can reach their maximum yield potential.

Promote starts working immediately on targeted weeds by stunting its growth, ultimately resulting in death of the weeds. Complete control typically occurs within 7 to 14 days depending on the weed size, species and growing conditions.

KEY BENEFITS

- Superior control of nutsedge and broadleaf weeds
- Extended residual activity - control broadleaf weeds all season long
- Outstanding crop safety
- Rapid dissolving formulation
- Flexible application timing and tank-mix compatible

KEY USES

- Corn: field and seed
- Dry beans and peas
- Grain
- Rice
- Sorghum
- Sugarcane

PRODUCT NOTES

EPA REGISTRATION NUMBER

91234-31

ACTIVE INGREDIENT

Halosulfuron-methyl 75%

FORMULATION

Water dispersible granule

HRAC NUMBER

2

SIGNAL WORD

Caution

PACKAGE SIZE

12 x 20 wt oz

RESTRICTED USE

No

PORTFOLIO

Bootstrapped and ready to serve, we deliver battle-tested chemistries and an experience like no other. Proud to be 100% American-owned, our mission is to help you every step of the way.

Atticus

APPLICATION INFORMATION

Applications of Promote™ should be made to actively growing weeds at the early stages of development. Apply by ground to produce uniform coverage on growing weeds or soil to ensure consistent weed control. Atticus recommends using a nonionic surfactant (NIS) spray additive for improved performance.

In post-emergent weed applications, Atticus recommends applying early to control troublesome weeds. If required, apply a second application for long-lasting residual control from early post-emergent treatments to control later germination of weeds.

RECOMMENDATIONS FOR OPTIMAL RESULTS

- Post-emergence applications:
 - Apply Promote early to small (1 to 3 inches in height) actively growing broadleaf weeds for superior control and to prevent heavy weed infestation.
 - For maximum control of nutsedge it is best to apply Promote at the 3 to 5 leaf stage.
 - Delay overhead sprinkler irrigation for 2 to 3 days after post-emergence application.
 - Do not apply to weeds that are under drought, stress, disease or insect damage.
- Annual weeds may have multiple flushes of seedlings, or treated perennials may sometimes re-grow from underground stems or roots, depending upon rainfall and other environmental conditions. To maximize control of such weeds, apply a sequential application of this product.
- Use Rate Equivalency:
 - Promote contains 75% of the active ingredient per pound of product. The following table lists the use rate equivalency in ounces of this product by pounds per acre of active ingredient.

OUNCES OF PROMOTE	POUNDS OF ACTIVE INGREDIENT PER ACRE
0.5	0.0235
0.67	0.031
1	0.047
1.33	0.062
2	0.094
2.67	0.125
5.33	0.250

KEY WEEDS

- Amaranth
- Cocklebur
- Foxtail
- Horseweed/marestail
- Kochia
- Mustard, wild
- Nightshade, black
- Nutsedge; yellow and purple
- Pigweed; smooth and redroot
- Pokeweed, common
- Ragweed
- Sunflower
- Thistle
- Velvetleaf

SUPPRESSION

- Horsetail
- Milkweed; common and honeyvine
- Morningglory; ivyleaf and tall
