The EMS Protocol Readiness Score

Five dimensions that determine whether your protocol infrastructure is serving your providers - and protecting patient outcomes.

Learn More Here

DIMENSION	⚠ THE RISK	✅ WHAT GOOD LOOKS LIKE
Accessibility 1 Your Score 5 <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/>	Protocols live in binders or outdated PDFs based mobile apps . Providers rely on clunky systems for high-risk, low-frequency interventions.	Digital, searchable, and available offline . A provider can find the answer in seconds, even without cell service . Uses the latest AI technologies .
Simplicity 1 Your Score 5 <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/>	Protocols are dense, text-heavy documents designed for a desk, not the back of an ambulance. Dosing and calculations requires multiple systems.	Visually clear, concise, and designed for field use. Key decision points and critical checks surfaced upfront. Weight-based dosing supported by built-in calculators.
Timeliness 1 Your Score 5 <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/>	Updates take weeks or months to distribute. You can't confirm who has the latest version. There is no self service desktop system to change content.	Updates pushed system-wide in minutes with automatic notifications . Track which providers have opened and acknowledged each update.
Analytics 1 Your Score 5 <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/>	No way to show what version was in effect on a specific date or which providers were trained on it within an LMS system .	Logs of every protocol, detailed analytics of questions asked, which protocols were being used, by who and when all linked to Learning Management System .
Governance 1 Your Score 5 <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/>	Protocols updated ad hoc getting external firms to do it. No dedicated web platform to manage these in real time.	Dedicated desktop platform for seamless real time changes. Clear roles and responsibilities. Changes follow a documented approval process.

What's your organization's total score? /25

KEY INSIGHT

The Elijah McClain case illustrated what happens when multiple dimensions are tested simultaneously. **No single gap caused the outcome — the compounding of gaps did.** Score yourself honestly on each dimension to identify where your agency is strong and where it may be exposed.
