## OUR VALUE-ADDED SERVICES INCLUDE HIGH- PRECISION DESIGN AND ENGINEERING.

McKey Perforating is the nation's oldest and most experienced perforating company. Discover how we've made *perforation perfected*, and what we can do for you.

**McKey can turn out anything from individual prototypes to long production runs, engineered and made in America and customized for your needs.**

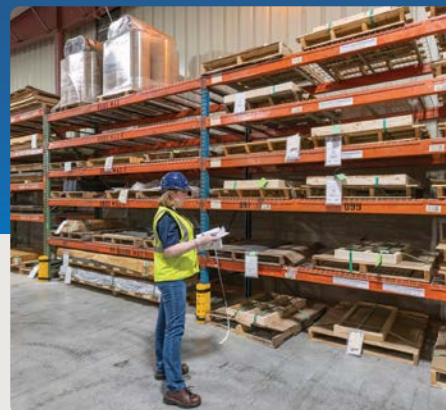

### About McKey Perforating

We're America's most experienced perforating company, with roots that we trace to pre-Civil War days. Since then we've continually expanded, while devising and refining design and manufacturing processes that have become industry standards. McKey's 94,000-square-foot facility in New Berlin, Wisconsin, contains the most advanced data-guided machinery for perforating and slitting coil, sheet and plate materials. Whatever you need in perforated metal, McKey will make it happen, on time and within budget.

### Services

Challenge us. You can choose from a wide array of standard perforation patterns, but keep in mind that we specialize in creating non-standard patterns customized to your application. We work with steel, stainless steel, aluminum, plastics and even aluminum composite (ACM). Our estimators, designers and engineers will figure out what it will take to transform your idea into a finished product. McKey custom services include lasering, shearing, slitting, forming, rolling, welding, notching and secondary holes. We'll make sure that hole size, shape and spacing, along with areas to be left intact, meet your exacting specifications.

### Stock

Besides engineering and perforating materials for custom applications, we have a warehouse full of ready-made perforated materials, available for quick shipment, in a wide variety of gauges, hole patterns and open areas.
