

STEPS TO CONQUER SHADOW IT

GAIN VISIBILITY

Business requirements change faster than what IT departments can support or adopt. Employee-created processes and services undermine visibility and efficiency.

Illuminate Your Cloud Footprint

- Discover SaaS, AI tools and any web-based service or supplier portal across the organization
- Uncover self-created accounts using corporate email, SSO, or Passkeys
- Uncover usage trends, risky apps or unused services

Large Language Models Open Source AI
Software Development and Coding

PASSWORD AND ACCESS HYGIENE

Employee-created accounts and phishing lead to breaches and ransomware without the need for sophisticated malware or targeted hacking.

Assess Each Account

- Are all passwords complex and unique?
- Has your domain password been reused or breached already?
- Are you passkeys device bound?
- Are private SSO-s used for corporate purposes?

Breached Corporate Password

Shared Account

Password Reuse

Very Strong Password

Password Autofill

Password Complexity

Passkey

RAISE AWARENESS

Security and compliance start with your employees. Target employees with tailor-made notifications via multi-channel campaign and a personalized dashboard.

ENSURE COMPLIANCE

Unknown assets and processes can not be audited for regulatory requirements. Personal, business, and financial data need to stay on your radar. Access rights, roles, and privileges should never stay invisible.

Analyze Your Supply Chain

- Where is your data stored?
- Are accounts being shared?
- What privacy policies and SLAs do your suppliers provide?

Which users show risky online behavior?
