Integrated Carbon Services

FarmN Pty Ltd is a global provider of carbon services, specializing in the decarbonisation of hydrogen and ammonia value chains. Our mission is to support the global transition to low-emission fuel, energy and fertilizer products by delivering high-integrity carbon accounting, certification, and crediting solutions. We serve clients across the fuel, energy, agriculture, and transport sectors, providing services that align with international best practices for greenhouse gas measurement and reporting.

*“250+ years of combined
experience in carbon
services, engineering, law,
policy & LCA”*

Carbon Intensity Certification

You will receive verified CI documentation for your products, enabling you to confidently claim and label them as “green hydrogen – X kg CO₂e/kg” or “green ammonia – Y% lower emissions than conventional”, etc. These certificates will support compliance with both industry (e.g. IMO) and regulatory programs (e.g. Australia’s GO scheme and the EU and UK’s CBAM) and bolster your ability to secure green premium contracts. In essence, CI certification translates the LCA analysis into a market-facing credential that can unlock both reputational and financial value.

LCA's

Through FarmN's LCA service, you will obtain a quantified, third-party-verifiable CO₂e footprint for your products and operations. This underpins all subsequent certification and credit efforts.

It demonstrates to regulators, investors, and partners the emissions performance of your low emission products, building credibility. It also provides a data foundation for pursuing product Carbon Intensity certifications, Carbon Credits and for substantiating any “green” claims in the marketplace

Carbon Credit Project Services

FarmN will deliver a clear strategy and execution plan that can yield significant additional revenue or cost offsets. High-integrity credits from your project could be sold to generate income; used to offset any residual emissions in your operations; or even retained to strengthen your company’s carbon-neutral claims. Positioning your project to be eligible for future carbon credits could be a useful risk management tool even if your project is currently being developed without credits in mind. FarmN ensures you will be well positioned to capitalize on any opportunity whilst creating only credible, regulator-approved credits that stand the test of time.

ESG, Regulatory Compliance & Carbon Market Advisory

Through this advisory relationship, your company gains a strategic advantage in managing its sustainability journey. The company will be able to confidently assert compliance and alignment with global standards, turning its ESG performance into a source of competitive advantage. Whether it's securing a license to operate, attracting investment, or ensuring smooth entry into a new market, FarmN's advisory ensures your company will meet every requirement and seize every opportunity related to carbon and ESG performance.
