

Turn ETH Market Access into Recurring Revenue with Turnkey Integration

Prometheum Capital's correspondent clearing model enables broker-dealers to earn on every ETH trade placed for its customers, including Digital Asset Treasuries (DATs).

Prometheum Capital's (ProCap) digital asset market infrastructure handles ETH trade execution, custody, post-trade, and reporting requirements in a familiar SEC-registered broker-dealer framework.

This means your firm can easily create ongoing revenue streams from all client ETH activity by partnering with ProCap.

Grow Your Digital Asset Business

Build new revenue streams with ProCap by leveraging our infrastructure-as-a-service to capture digital asset revenues on order flows, custody, and credit balances without incurring costs, need to develop technology, or compliance risk.

In addition, we provide:

- FINRA member and SEC-registered digital asset securities broker-dealer and Qualified Custodian
- All order routing, best execution support, settlement, clearing, and custody
- Fully integrated post-trade reporting, segregated wallet and account management
- Minimal upfront technology or compliance costs

Turnkey integration

- Execute corresponding clearing agreement and complete due diligence questionnaire
- Submit clearing agreement to FINRA
- ProCap provides onboarding procedures and compliance package including working supervisory procedures (WSPs) and broker-dealer education materials
- Enable access to digital asset order entry interface
- Test workflows and procedures
- Offer access to and service digital assets for your customers

Grow your digital asset business with ProCap

Prometheum Capital provides FINRA member and SEC-registered access to digital asset markets through infrastructure purpose-built for broker-dealers. Starting with ETH custody, Prometheum Capital bridges today's traditional securities markets with tomorrow's fully digital, on-chain securities markets.

Here's how it works

Order placement:

Client places ETH order through broker-dealer's sponsored access portal routed through ProCap's trading interface (GUI).

Trade execution:

ProCap connects to multiple exchanges to source price quotes and achieve best execution.

Risk management and trade controls:

ProCap maintains required 15c3-5 market access controls for firm-level accounts.

Settlement and custody:

Order is matched, ETH and/or cash settled under DVP/RVP terms and custodied at ProCap.

Post-trade and revenue share:

ProCap books the transaction, and you receive a revenue share. ProCap provides month-end statements and required reporting.
