# SMARTER SECURITY WITH AGENTIC AI

Next-generation security technology that detects, deters, and defends with minimal human involvement.

From monitoring assets, monitoring sites, monitoring areas of interest, responding to threats, and managing evidence, LVT's agentic AI-powered security helps you move from reactive to proactive protection.

## STOP CRIME BEFORE IT STARTS

AI-powered talk down makes intruders think twice. Our system doesn't just alert—it responds. With custom audio that describes what someone is wearing or doing, LVT makes sure they're seen and heard.

*"Would the person in the hoodie and gray pants step away from the sedan. You are under surveillance and the authorities have been called."*

## SMARTER AI THAT UNDERSTANDS BEHAVIOR

Most systems detect motion. LVT's advanced AI analyzes behavior with context—not just movement—spotting loitering, intrusions, and other suspicious activities.

## FAST, SMART EVIDENCE SEARCH

Find what you need in seconds. Skip the footage scroll. LVT's forensic search lets you type natural prompts like "man in red shirt at midnight" to pull the exact clip instantly.

## A FORCE MULTIPLIER

Imagine what you and your operators can do with all the time saved by LVT's agentic AI. Learn how at [lvt.com/product/agentic-ai](https://lvt.com/product/agentic-ai).
