**MORE ALERTS
MORE HOURS**

Example use cases:

Retail Daytime

Trucking Daytime

Gas Station 24/7

Dealerships Overnight

Matchmaking

Considering the individual industry, pain points, schedule, and needs, LVT makes a custom match between the customer and the ideal central station.

PAIN POINTS Be it fuel theft, homelessness, loitering, employee/customer safety, we focus on your specific issues and ensure alerts efficiently indicate valid concern.

ALERT DETECTION ZONES Third-party central stations are rigorously trained on analytic zones and areas of interest with advanced technology in order to alarm based on intelligence not motion.

SCHEDULE Most alerts happen when your business is closed. We will work with you to discuss different options to create the most effective alerting hours.

PROTOCOLS Operators assess the threat to property based on the alert received. They will call you to verify activity on-site or escalate to the police department.
