

ON CALL FOR SAFETY:

SECURING HOSPITALS AROUND THE CLOCK

A hospital never sleeps. Every hour brings vulnerable patients, high-stakes calls, critical equipment to protect, and frontline workers carrying the weight of it all. While the mission is medical, the threats are very real. Vandalism, theft, assaults, loitering, drug activity, and unauthorized access occur every day. Surveillance is essential to saving lives.

HOSPITALS & MEDICAL CENTERS

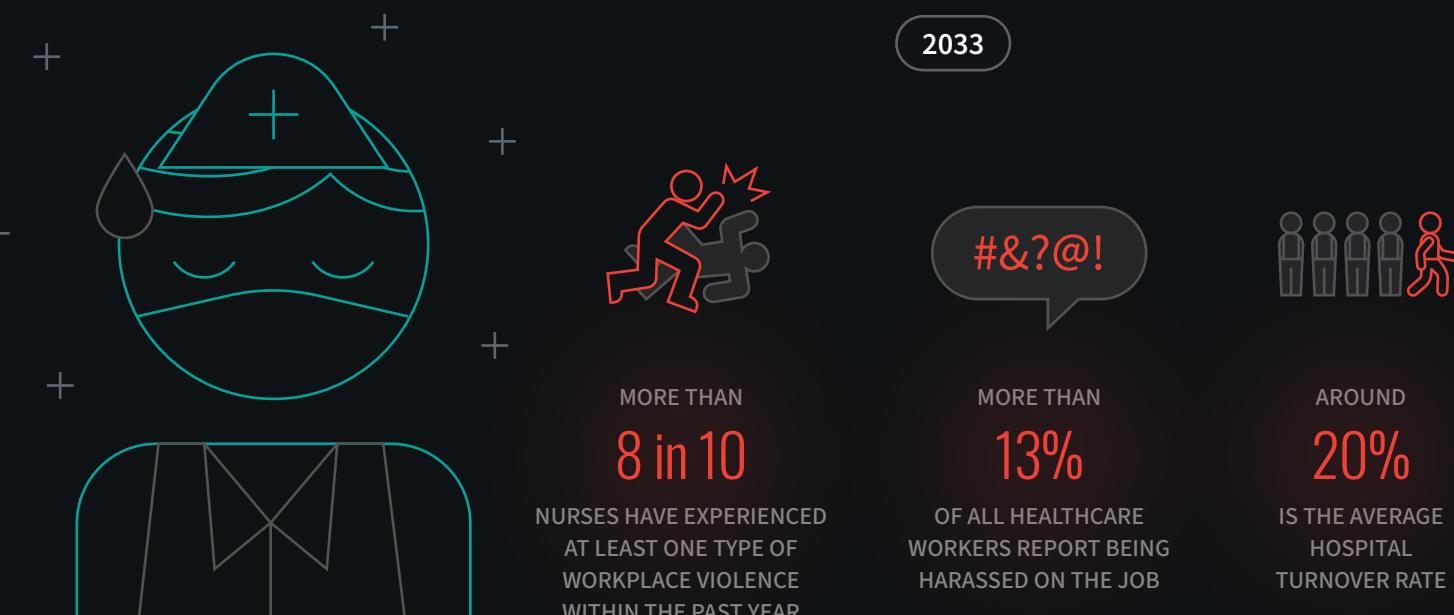

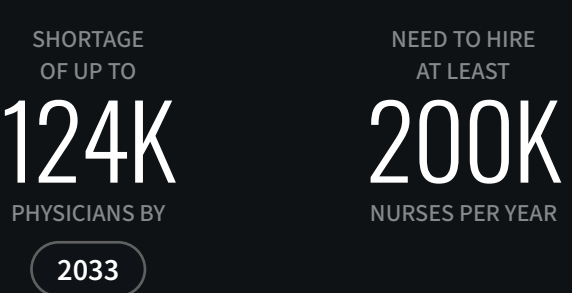

HIGH-RISK ZONES

Criminals use the constant flow of people and vehicles to blend in, then strike when no one’s looking. Outside, parking lots turn into prime targets for break-ins and theft. Inside, without vigilant monitoring, tense moments at entrances and ER waiting rooms can escalate in an instant.

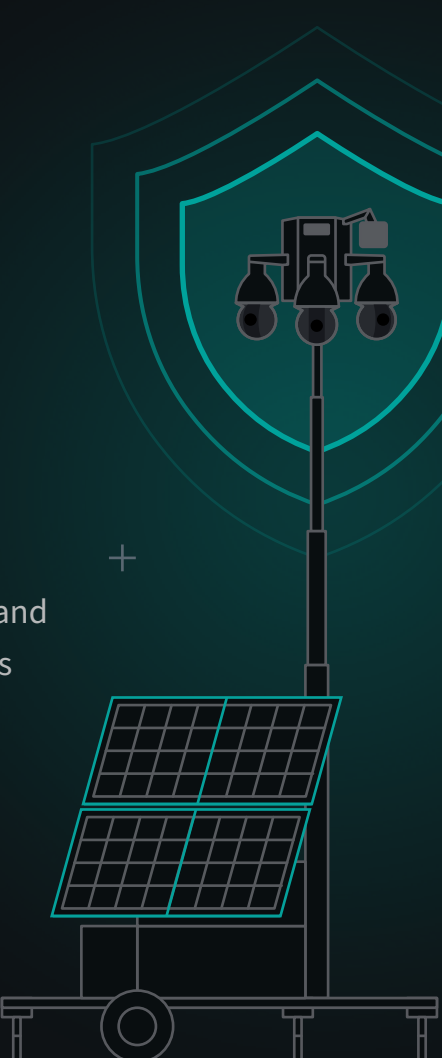

HEALTHCARE WORKERS DESERVE BETTER

The U.S. is facing a shortage of up to 124,000 physicians by 2033, and will need to hire at least 200,000 nurses per year. Long hours, heavy workloads, and emotional stress contribute to burnout, leading many to seek professions in a different industry.

THE SECURITY SOLUTION

LVT helps the healthcare industry increase safety and security for its employees and patients.

“Our staff and the hospital employees feel more safe in the evening hours going to and from the hospital.”
