

ACHIEVE FULL SITE COVERAGE **WITH LVT**

Organizations often face a vicious cycle: Site safety and security issues force a conversation around gaps in your strategy. Guards are already in place. Some of your physical sites lack the infrastructure to support cameras. What else can you do?

Enter LVT. We offer rapidly deployable solutions that help you achieve full coverage and solve the unique safety and security problems affecting your sites. Our cost-effective solutions ensure visibility across your locations for a fraction of the cost of guards.

LVT UNIT

Known as a “trailer” or mobile security unit (MSU), our solar-powered LVT Units are prized for their ease of deployment without impacting your IT infrastructure.

LVT UNIT WITH SMART GENERATOR

Ideal for areas with less sunlight, these LVT Units use smart generators to maintain our industry-leading uptime, outperforming traditional diesel-powered models while better protecting the environment.

POLE-MOUNTED LVT UNIT

The pole-mounted option provides important coverage when an MSU may disrupt the aesthetics and function of your site or if height is a factor.

WALL-MOUNTED LVT UNIT

If an MSU is too large for a given area, a wall-mounted option can provide you with peace of mind without sacrificing precious real estate.

EXTENDED VIEW WALL-MOUNTED LVT UNIT

When needing visibility on multiple sides of a structure, the wall mount with extended view draws cameras out as far as 100ft from the LVT Unit, so you can see around corners and cover blind spots.

The mere presence of an LVT unit is proven to help deter crime.
