

## WHEN ARS MEETS ROI

# Blue Eye Alert Response Services for LVT Mobile Surveillance

## When Guards Sleep, We Watch Flexible, Rapid, and Cost-Effective Site Protection

Blue Eye, a Motorola Solutions company, and LVT's strategic Alert Response Services (ARS) partner, delivers live, AI-augmented monitoring and real-time audio deterrence through LVT's mobile surveillance trailers. Together, Blue Eye ARS and LVT stop threats early at a fraction of traditional guarding costs.

Blue Eye ARS provides remote verification, live deterrence through operator talk-downs, customer notifications, and law enforcement dispatch when escalation criteria are met. Event evidence, operator notes, and alert history are available through client dashboards and security performance portals. ARS is powered by Blue Eye, a Motorola Solutions company.

## WHEN TO CHOOSE ALERT RESPONSE SERVICES WITH LVT

Blue Eye ARS deployed on LVT mobile surveillance trailers is ideal for:

**Construction sites:** protect equipment, materials, and fuel on dynamic job sites

**Critical infrastructure:** safeguard remote or high-risk sites where fixed cameras are impractical or physical staffing creates coverage gaps

**Retail and distribution yards:** monitor parking, loading zones, seasonal overflow storage, or secured staging areas

**Public safety and municipal locations:** maintain a visible deterrent presence at parks, government facilities, or regulated spaces during off-hours or restricted access periods

## WHEN ALERT RESPONSE SERVICES ARE NOT THE RIGHT FIT

Alert Response Services deployed on LVT trailers are not ideal for environments that require standard daytime monitoring of active business operations.

Examples include open retail stores during business hours and multi-family properties during peak resident activity.

ARS is also not suited for sites where fixed-camera integrations, rather than mobile trailer deployments, are the primary requirement for full operational coverage. Locations that resemble the above profile are typically better served by a continuous, integrated fixed-CCTV monitoring program.

## WHY ADD ALERT RESPONSE SERVICES?

### PROACTIVE SECURITY:

trained Blue Eye central-station agents verify alerts and intervene with real-time audio deterrence, notifications, or dispatch based on defined rules

### FASTER RESPONSE:

video-verified incidents lead to 3x faster police dispatch compared to unverified alarms

### COST EFFICIENCY:

extend or replace guard coverage at a dramatically lower incremental cost while maintaining strong outcomes

### ACTIONABLE INSIGHTS:

event evidence, operator notes, escalations, and dashboards support compliance, insurance, and smarter security decisions
