# MULTI-SENSOR PANORAMIC CAMERA

FOUR SENSORS. ONE CAMERA.  
TOTAL SITUATIONAL  
AWARENESS.

Most security deployments require multiple cameras to cover a wide area, each adding potential cost, power draw, and maintenance. The NDAA-compliant multi-sensor panoramic camera, available as a camera configuration on select LVT solutions, changes that equation. With four integrated sensors in a single device, it delivers expansive site coverage without multiplying your hardware footprint.

## ONE DEVICE, ZERO BLIND SPOTS

Four sensors work together to eliminate blind spots across large or complex environments—parking lots, perimeters, construction sites, event venues, and more.

**FOUR SENSORS IN A SINGLE HOUSING** Panoramic coverage without the complexity of multiple devices, with analytics available on two sensors at a time

**VIEW EVERY ANGLE WITH MOSAIC VIEW** Access up to four streams at a time in the LVT VMS with mosaic view of camera feeds

**DETECT INDIVIDUALS UP TO 150 FT**  
Identify threats at distance before they become incidents

**2X OPTICAL ZOOM** Achieve meaningful detail with fixed zoom capability

◀ Available on Live Unit Surround and standard Live Unit deployments (including MSU and wall)
