CRIMINALS CAN'T HIDE FROM

INTELLIGENT DETERRENCE

Bad actors learn quickly. They test the limits of a site's cameras, alarms, and pre-recorded messages, and once they see the same response twice, they stop taking it seriously. The Intelligent Deterrence package changes that. Deterrents like LVT's AI Talk Down and Auto-Tracking Spotlight respond and adapt to what's happening in the moment, giving the impression that someone is watching. Each incident deterred means one less event to respond to and one less case to build, so your team can focus on what requires human intervention.

"You in the black hoodie, please leave immediately."

AUTOMATE PERSONALIZED, COMMANDING RESPONSES WITH AI TALK DOWN

Unlike pre-recorded messages that bad actors may learn to ignore, LVT's AI Talk Down speaks directly to the person on site in real time. It calls out specific traits like clothing color, accessories, and location, which creates the impression of someone watching. If they stay, the response escalates. Every message is logged for review, so you can confirm what was said and flag any misses.

STOP BAD ACTORS IN THEIR TRACKS WITH AUTO-TRACKING SPOTLIGHT

A floodlight just lights up an area. LVT's Auto-Tracking Spotlight follows a person or vehicle entering a detection zone. It moves like someone is steering it. The beam trails slightly on fast-moving subjects before catching up. When a vehicle pulls in and someone steps out, it follows the vehicle and then shifts to the person. With Intelligent Deterrence, the light and audio work together, so the response feels like it's coming from an operator focused on your site.

Bad actors test the limits of traditional on-site security. The Intelligent Deterrence package will regularly be updated with new capabilities, so your response evolves as criminals change tactics. Ask about adding it to your sites today.
