

WET BASEMENT?

Restore the integrity of your basement by addressing the root of the problem, keeping it dry with our basement drain systems and warranted waterproofing.

INTERIOR DRAIN SYSTEMS

On-Header Drain System

Revolutionary top-of-footer drain systems accommodate a thicker concrete floor and better disperse weight to reduce cracking. The 4" flange that extends up the wall acts as a built-in diverter, directing water through weep holes, pipe, and away from the foundation.

Footer Drain System

Footer drain systems consist of a perforated sock pipe buried in a gravel-filled trench deep beneath the basement floor. These interior drain systems direct water to a sump pump or gravity drain and away from the foundation.

The Sump Pump

The automatic sump pump collects water captured and routed along the perimeter of the foundation by the drain system. The rugged design of the sump basin is sealed to help keep moisture and musty smells from entering the basement. The sump pump prevents water from building up by acting as a discharge point, routing water to the drain outlet.

The Drain Outlet

A pipe in a gravel-lined trench diverts water away from your home. Discharge lines terminate with a pop-up valve which blends in with landscaping. Recessed installation eliminates tripping hazards, and grated openings protect from animals, leaves, and debris.

The Ox Difference

- Help prevent water intrusion & water damage
- Deter mold, mildew, & wood decay
- Deter dampness, efflorescence & musty smells
- Protect your home with a lifetime drain warranty
- Customized solutions designed for your home
- No hidden clauses. No fine print.
- Free estimates. No hassle. No obligation.
- More experience. More satisfied customers.
- Guaranteed Ox Strong!

Keeping Homes Dry & Stable

- Basement interior drain systems
- Basement exterior drain systems
- Sump pumps, gravity drains
- Downspout extensions
