Torsion Field Image

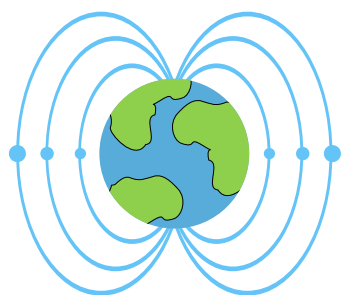

Everything in creation has an energetic field around it called a torsion field.

EESystem Simplified

Our bodies sync to the environments we spend time in, those environments dictate the expression of our health. Spending time in the environment of the EESystem helps our bodies sync back up to our true nature, which is divine health and wellness.

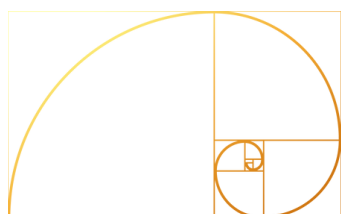

EES scalar field generators create a natural coherent toroidal field of energy that goes out in every direction 2.2 miles, up, down, left, right, forward, back, and everywhere in between. This coherent torsion field is a natural healing field of infinite flowing energy. It is able to neutralize all negative, detrimental fields and their harmful effects that lead to weakness and disease. Harmful fields are produced by pollution, chemicals, toxins, satellites, power lines, WiFi routers, cell phones, TV and computer screens, and all forms of radiation including EMF, ELF, 5G and microwaves.

EES scalar field generators neutralize all forms of radiation, break down the DNA of disease-causing pathogens, repair breaks and genetic damage in our DNA, and lengthen the telomeres for anti-aging effects. Scalar energy also helps correct the polarity of the cells so they can hold a charge. Optimizing cellular energy levels back to a normal range of 70 to 90 millivolts.

Schumanns Resonance 7.83 Hz

The EES screens emit the Schumanns Resonance. This resonance is the heartbeat of planet earth that helps our bodies come back into their naturally, grounded healthy state. AKA “Earthing” or “Grounding” It is the earth’s natural electromagnetic frequency. It positively affects brain health, calms the nervous system, strengthens the immune system, reduces inflammation and improves sleep.

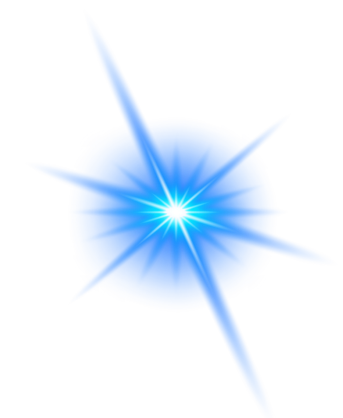

Fibonacci Sequence

The EES screens emit the Fibonacci Sequence.

AKA “The Code of Creation”- “The Golden Ratio”. It is a set of numbers, in certain ratios of those numbers, seen in every part of creation: 1 2 3 5 8 13 21 34....and so on. The numbers are in exact order of how an embryo grows, how flowers bloom, and everything from beginning to end moves according to this set of numbers. The speed and movement of the EES screens is programmed to keep looping itself in the unit of seconds with the Fibonacci Sequence.

↑ 1 ↓ 2 ↑ 3 ↓ 5 ↑ 8 ↓ 13 ↑ 21 ↓ 34....and so on.

As part of nature’s counting system, the Fibonacci Sequence activates and mobilizes the body’s stem cells to assist with the cellular replication patterns of the body.

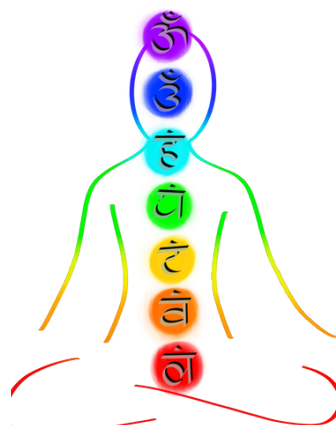

Light Therapy

Light is emitted from the EES screens. The screens are perfectly laser aligned within 100th of an inch. This causes an implosion of the light particles to collide in the center of the room, creating a 70 to 90 millivolt charge, which RECHARGES the cells of the body. The cells of the body are like little mini batteries that hold an electrical charge in the form of millivolts. Healthy cellular millivolts is between 70 to 90. Anything below 70 to 90 opens the door to the dis-ease process. The light particles are absorbed into the body via the skin, giving the body the charge to discharge whatever is causing dis-ease. This allows for the body to use the energy for REPAIR and REGENERATION.

Color Therapy

Color Therapy is emitted from the EES screens.

RED ORANGE YELLOW GREEN BLUE INDIGO VIOLET

The Colors of the Rainbow are a Spectrum of Energy that produce a frequency in the form of wavelengths.

Nanometers are used to measure the wavelengths of the energy of color.

360 nanometers - 720 nanometers is the spectrum of the energy of color.

Color RED is energy that is expressed at 360 nanometers of wavelengths that we perceive as RED.

The 7 Chakras or Energy Centers of the body are balanced by these colors:

Remote or Distance Therapy with the Energy Enhancement System Explained

Remote EES Therapy Explained

A photograph is alive with your signature energy field. Your energy field is produced and emitted from your body due to the electron movement within your physical body.

By syncing your energy field up with the hyper-healthy energetic environment of the 'Energy Enhancement System' you are providing both your energy body and physical body with divine frequencies of nourishing energy and information that by natural design your body knows how to utilize.

'The body emits vibration, sound and light.'

Electron Movement Within – 'Basic Physics'

Electrons travel through pathways in our body known as meridian channels in Chinese Medicine.

The electron movement through the meridian channels produces an electric current that runs throughout the body.

The electrical signal that is produced by the electron movement in the meridian channels travels through the tissues of the body and around the organs nourishing them with energy and information.

Electrons feed the tissues and the organs via the blood flow and the lymphatic flow.

The blood flow literally carries electrical signals. Blood plasma is made of salt and water.

Red blood cells are made of salt, hemoglobin, protein and water.

The amount of salt and hemoglobin in a blood cell determines how much electrical charge it is capable of conducting. Chinese Medicine says, "Wherever blood flows, electricity flows".

Electron Movement, Vibration and Sound Create Waves of Polarity

The speed of the electron traveling through the meridian channel creates a vibrational pattern that creates a sound wave. That sound wave in turn creates an electrical field that then starts to act like a magnetic field, exhibiting positive or negative polarity depending upon whether the electrons are spinning in a clockwise direction (health) or counterclockwise direction (dis-ease).

When these two fields combine they produce an electromagnetic field.

The movement of electric current (i.e. the flow of electrons) through the meridian channels creates a bunch of small electromagnetic fields all around the body. This information that your body then emits is in the form of wavelengths and amplitude.

Wavelength or frequency describes how far apart the waves are, and amplitude describes the strength or how high the waves are. This creates for each of us our own unique 'signature' electromagnetic field (energy field), which acts as an energetic cellular template for the physical body.

'We are composed of material that is there to help us transmit & receive frequencies.'

How Remote EES Therapy Works Using Electromagnetic Energy Of Light Waves

Electromagnetic energy is light. Light is made up of packets of energy called photons.

Photons carry momentum, have no mass, and travel at the speed of light (186,282.4 miles per second).

We are bodies of light. Our bodies are composed of piezoelectric crystals, which are capable of accumulating and storing electrical charges. These crystals are throughout the skin, fascial system and DNA.

These crystalline formations measure and carry light.

Our DNA is biophotonic meaning the prime function of the DNA is the storage of photons.

As DNA also carries our genetic code, this means that our genetic material is biophotonic.

The fascial system, which is a 3 dimensional web of tissue that surrounds every muscle and organ, is made up of salt, water, proteins and sugars. It also conducts electricity, especially emotional signals, and is connected to the DNA.

The particle-like properties of light are captured on a digital image or photograph.

A **photograph** of an individual captures their 'signature' electromagnetic field (energy field).

This 'signature' electromagnetic field contains the individual's energetic cellular template of their physical body and DNA. Thus, a person's photograph can be used for remote or distance healing in place of the person's physical presence by utilizing the packets of energy from light waves captured on a photograph that travel to the individual at the speed of light. Since we are bodies of light, each one of us are like beacons of light with our own signature frequency wave of light. This is how a photograph used for the remote EES therapy is able to link the person up with the nourishing environment of the 'Energy Enhancement System' and find the individual wherever they are in the world.

Remote EES therapy works with the body's electromagnetic field of frequencies, helping the body neutralize the frequencies of disharmony within and improve the body's self-healing abilities.

Everything on this planet is designed to have the electron movement within spin in a clockwise direction of polarity. Any dis-ease causing pathogen or toxin will have a polarity spin of counterclockwise. This is where syncing your body up in the nourishing environment of the 'Energy Enhancement System' helps to correct the polarity spin of the electrons and neutralize dis-ease causing pathogens and toxins.

In effect, this directs substances with challenging frequencies to reverse their polarities, neutralizing the challenges at the cellular level thus reducing the burden on the immune system.

The body will **ONLY** receive the nourishing frequencies of information as they are needed by the body to bring balance without any negative side effects.

Remote or Distance EES Therapy is Accomplished with Photograph(s).

Each photograph that is placed in the EESystem produces a supportive healing strength of 30%.

After much research and testing of exactly how effective remote or distance healing can be in the EESystem with just a photograph, it turns out that it is even more effective than I initially thought it would be.

In my research and testing process I tested a select group of both humans and animals.

I focused on tracking their cellular millivolts using my Electromagnetic Testing Technology equipment.

What are cellular millivolts? The cells of the body are like little mini batteries that hold an electrical charge in the form of millivolts. Healthy cellular millivolts are between 70 to 90. Anything below 70 to 90 opens the door to the dis-ease process.

For example, I discovered that when physically present in the EESystem, a person's cellular millivolts would recharge at a rate of 1 point per hour.

With each photograph offering a supportive healing strength of 30%, I then discovered that with just 1 photograph (30%) the average person's cellular millivolts recharged at a rate of 1 point per day.

Then with additional guidance from the Lord I began to test how many photographs they would need in the EESystem at one time. I found that their cellular millivolts were able to recharge upwards of 5 points per day, all depending on how many photographs were used.

Animals recharge really fast, sometimes 12 to 15 points per day just with the photograph(s).

One of the many testimonies that happened was of a horse, her euthanization was called off just by adding the supportive strength of 3 of her photographs (90%) in our EESystem. It made that much of a difference.

Another testimony that came through was of a young gal in her 40's with cancer.

She had exhausted all of the chemotherapy and chemotherapy trials that Western medicine could offer her and decided to give the remote healing therapy with the EESystem a try; she had nothing to lose.

After a week and a half of her 7 photographs (210%) being remotely in the EESystem she texted me with great excitement, stating that she just got back from a doctor's appointment and her tumor numbers had gone down from 42 to 24. It has been one month now, and her tumor numbers continue to go down.

I bet those doctors are scratching their heads.

I plan on purchasing additional testing equipment in order to evaluate one's progress on a deeper level with the use of the EESystem both in person and remote. Being able to track and measure the health of the other organs, systems and functions of the body would only give greater insight and tracking progress for health recovery outcomes.
