

Actionable Intelligence to better detect and respond to Biomedical risks & outbreaks

Hazard Type Info

DisasterAWARE's biomedical hazard type provides users real-time global monitoring and situational intelligence to better understand and respond to biomedical events, such as CDC travel notices, US State Dept advisories, Risk and Vulnerability scores by country/region assessing resiliency to respond to biomedical outbreaks, and more. Know what assets & employees may be impacted, as well as the general exposure within the hazard zone (population, households, economic value, etc).

Focused Alerting

View and keep tabs on global Biomedical activity or define SmartAlert areas to receive Smart Alerts only for the places you care about.

Enhance the monitoring and protection of specific assets
(e.g. buildings, team and resource locations)

Hazard Severity & Data Source

Issued for single or multi-country events:

Sources: World Health Organization (WHO), Centers for Disease Control and Prevention (CDC), regional and country authorities

Warning

High morbidity and mortality. Substantial public health consequences requiring an international response. Take immediate action.

Watch

Moderate public health consequences. Deterioration of local response capacity and weakening of health system.

Advisory

Cautionary phase. An event potentially requiring a response has occurred. Unlikely to require immediate action.

Information

Preparatory phase. Event is being monitored by authorities. No immediate response.

Enhanced Monitoring and Protection of Assets

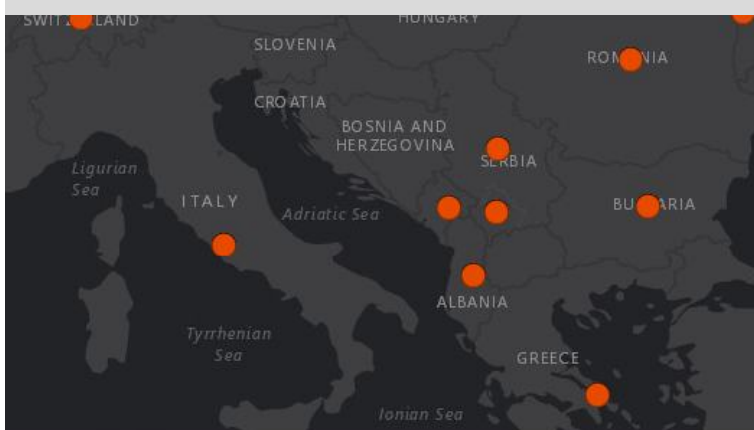

Quickly assess the event/ impact and view related GIS layers

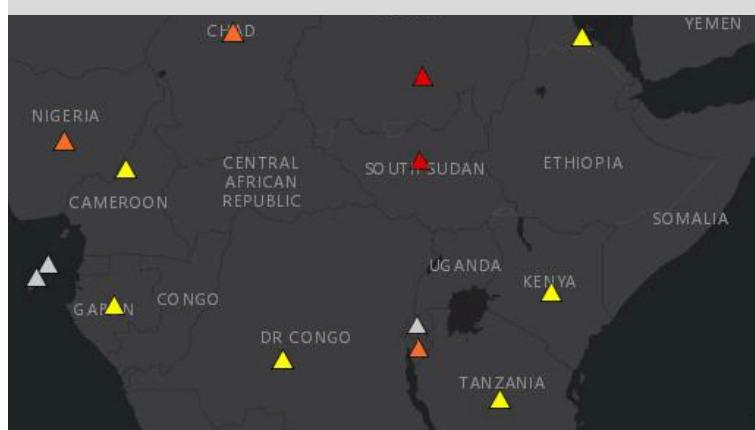

BIOMEDICAL
Malaria - Florida, United States

Global and National Assessments

Critical Infrastructure

Quickly answers:

- **What** happened?
- **How bad** was it?
- **Where** was it?
- **What actions** do I need to take?

Event Brief

Based on the PDC Smart Alert Area.
(See example below.)
