

AS9100D and ISO 9001 Certified

Parts Life Inc and DeVal Lifecycle Support are both certified to AS9100 and ISO 9001 standards. Reflecting our commitment to the highest standards of quality in the aerospace and defense industry. AS9100 builds upon the ISO 9001 framework by adding enhanced requirements for product safety, risk management, and regulatory compliance. It places a strong emphasis on preventing critical part failures an essential safeguard in mission critical environments. These certifications demonstrate our dedication to delivering reliable, compliant, and high-performance solutions that support the customer and the warfighter.

Industry-Specific Standard

Built specifically for aerospace, aviation, and defense, goes beyond ISO 9001 by addressing the demands of mission critical environments

Counterfeit Part Prevention

Introduces mandatory processes to detect, control, and prevent counterfeit or suspect parts from entering the supply chain

Risk-Based Thinking

Requires proactive risk assessment and mitigation at every stage of the process, including design, production, and delivery

Product Safety Focus

Adds detailed safety protocols to prevent failures and ensure reliability in systems where lives are at stake

Regulatory Alignment

Supports compliance with ITAR, DFARS, FAA, DoD, and other U.S. and international defense standards

Traceability and Configuration Management

Ensures complete traceability of components and strict control over design changes and documentation

Global Recognition

Recognized and often required by leading primes such as Lockheed Martin, Boeing, Raytheon, and Northrop Grumman

Warfighter Readiness Support

Helps manufacturers and suppliers maintain the reliability and readiness of equipment that directly supports military operations

Parts Life, Inc. | AS9100D 8.3 Certified for Precision Defense Design

At Parts Life, Inc. our AS9100D 8.3 certification reinforces our commitment to design in support of aerospace and defense readiness. Clause 8.3 specifically governs the design and development process, ensuring that every stage from initial concept through final validation follows structured controls for risk management. This includes strict oversight of design inputs and outputs, comprehensive design reviews, and documented procedures for managing changes.

The certification also mandates controls to prevent counterfeit parts and ensure supplier accountability. These safeguards help us deliver design solutions that are not only compliant, but engineered for performance and reliability in mission-critical applications.

Feature	ISO 9001	ASD9001D
Scope	Quality management only	Quality management, product safety, reliability, and defense readiness
Risk Management	Risk-based thinking (less detailed)	Continuous risk assessment from design to delivery
Project Management	Very general project management principles	Implements structured project controls built to meet defense-specific needs
Regulatory Compliance	General regulatory compliance	Aligned with strict aerospace and defense regulations, including ITAR and DFARS
Product Safety and Reliability	No explicit safety requirements	Includes dedicated clauses that address and reduce the risk of mission failure
Controls for Production Changes	Basic controls for production changes	Applies stricter oversight to production changes to maintain control in mission-critical environments
Supplier Management	Basic supplier evaluation and control	Includes performance monitoring, and measure to prevent counterfeit parts
