Looking forwerd to seeing everyone at the redit community tomorow and discussin our stratijies for creatin a map circel. First: Put an armur stand in the middl of your circel. Name it whatever you want (I wil be naming it "jeff" for the sake of this tutorial). Third: Get a repeating command block and paste this command in: execute at @e[type=armour_stand,name=jeff] run setblock ^ ^ ^50 minecraft:oak_planks *replace "jeff' with whatever you named your armur stand, replace "50" with the radius of your circel, and replace "minecraft:oak_planks" with whatever block you want to use* Fourth: Now we need to spin the armur stand :). Paste this command in anothr repeating command block: execute as @e[type=armour_stand,name=jeff] at @s run tp @s ~ ~ ~ ~1 ~ *Again here you have to change "jeff" with whatever you named your armur stand* Fifth: Just turn on your command blocks usin a lever or a redstone block. And thats it!! Years ago I used som circle/ellipse generator, that had the optioon to use slabs and staires to get beter results, when buildin arces of my brigde. Now I am once agen building a larg brigde, but I cant find that generator, or any othir that would us som slabs and staires, enmore. Do you know where could I find that generator? Edit: I found it. Bing was more usfull than Google, who knew. It is here: millerti/circlegen.html Go to Minecraft Archived post. New comments cannot be posted and votes cannot be cast. New to Reddit?
