Window repair costs typically range from \$100 to \$800 per window, depending on factors such as damage extent, frame material, glass type, window size, and location. Labor rates vary between \$75 and \$200 per window, depending on the contractor and location. The cost of repairing a broken window starts with the extent of the damage; minor fixes require fewer materials and labor hours, while extensive repairs may necessitate full replacement. Some issues, such as fixing broken sash cords, seals, tracks, or flashing, can be done by professionals for \$200 to \$600, while others, like thermal seal replacement, may cost more due to required extra labor.

**Window Repair Costs: A Comprehensive Guide**

The average homeowner spends around \$120 for a single-pane or double-paned window repair. For cracked windows with a span of multiple panes, repairs might not be possible and could cost anywhere from \$200 to \$400. If the thermal seal is broken, it can cause fogging and condensation, but this issue may also stem from other problems like a bad or rotting window frame. Repairs for these issues usually cost between \$75 and \$200 for hardware restoration, with labor costs being the primary contributor to the overall expense.

Window leaks typically range from \$50 to \$150 in repair costs, depending on the severity of the issue. Some simple fixes might involve only caulking, which can be done at a lower price point of around \$50. For window frames made of vinyl or aluminum, repairs are generally cheaper than those for high-end wood frames. Vinyl frame repairs cost between \$100 to \$300, while wood frame repairs can go up to \$600 per window. Performing routine maintenance on windows can help reduce the likelihood of damage and costly repairs. However, extensive damage requiring rebuilding the wood frame and installation may cost more than \$1,000. Tempered glass upgrades increase impact resistance, but come with a higher total repair cost. Low-e glass and tinting are common treatments that can help reduce energy bills. The cost of repairing windows varies greatly depending on the type of glass and window, with standard glass being less expensive than specialized types like tempered or low-e glass. According to Boyko, the type of window requiring repairs plays a significant role in determining the final cost. Windows with one, two, three, or five panes can have dramatically different repair costs. Single-pane windows, such as picture windows and skylight windows, are typically the easiest to repair, with average costs ranging from \$75 to \$200 or \$3 to \$4 per square foot. Double-pane window repairs usually cost between \$200 and \$400, while three-pane windows can range from \$500 to \$1,000 for common repairs. Five-pane windows, like bow windows, are often the most expensive to repair, with costs exceeding \$600. The cost of repairs also depends on factors such as accessibility, materials, window size and shape, urgency, and home location. For instance, first-floor window repairs tend to be less expensive than those on higher floors, while aluminum and vinyl windows are more affordable to repair than wood windows. Additionally, larger and more complex windows generally cost more to repair. Some window repairs can be done DIY, such as fixing a broken latch or hardware, which can help save money. However, more complex repairs may require professional assistance, resulting in higher costs. The estimated repair costs for different types of windows are as follows: arched (\$200-\$600), awning (\$200-\$400), bay windows (\$250-\$600), bow (\$600-\$1,000+), casement (\$150-\$500), circle (\$200-\$500), egress (\$250-\$800+), glass block (\$75-\$200), hopper (\$75-\$200), jalousie (\$75-\$250), picture (\$130-\$450), skylight (\$200-\$500), sliding (\$130-\$500), storm (\$100-\$300), and transom (\$75-\$200).

**Window Repair Costs: A Breakdown of Labor and Materials**

Window repair jobs can be cost-effective solutions to avoid further damage. A professional installer will assess your windows and provide a quote for any necessary repairs. Some common issues and their estimated costs include:-

- Window Leak: \$100-\$600
- Thermal Seal Repair: \$75-\$200
- Window Balance: DIY \$50, Professional \$100
- Sash Cord Repair: DIY \$35, Professional \$110
- Flashing Repair: \$400
- Frame Repair (minor): \$75-\$200
- Frame Repair (rotted): \$250-\$800

Foggy windows can range from \$75 to \$200 in cost. Broken glass repairs typically fall between \$75 and over \$2,000, depending on the type and size of the window. Sometimes, replacing a window might be more economical than repairing it, especially if the glass is historic or premium quality. The cost of repairing a single-pane window usually falls within the \$75 to \$200 range. Repairing dual-pane windows can cost between \$200 and \$400, while three-pane windows may require an investment of \$600 to \$1,100 or more. Window type significantly impacts repair costs. For instance, skylights, casement windows, and picture windows typically fall within the lower end of this price range. Bay windows and arched windows with multiple panes can be more expensive. Several factors influence window repair costs, including material, extent of damage, emergency repairs, accessibility, and whether multiple windows need to be repaired at once. The cost also depends on the skill set and time investment required for DIY repairs versus hiring a professional contractor. A cracked or broken window can be fixed by repairing the glass pane with epoxy or by replacing it entirely. Window thermal seal repair costs between \$75 to \$210, depending on the severity of the issue. A damaged seal allows condensation and fogging between panes, which can lead to costly repairs if not addressed promptly. Replacing the entire insulated glass unit (IGU) is another option, costing around \$200. A cracked window doesn't always require full glass replacement, as small cracks can be fixed using epoxy when done properly. Window glass replacement costs \$50 to \$200 for a single pane and \$200 to \$600 for a double-pane window. Promptly replacing broken panes avoids water intrusion and security issues. Window frame repair costs between \$150 to \$600, depending on the condition and material of the frame. Damaged frames can be repaired with patching holes or filling small cracks, but rotted frames often require replacement rather than repair. Fixing a window spring or sash balance costs \$50 to \$100, as springs get damaged or misaligned over time. A window sash or track repair costs between \$200 to \$500 to replace the part. Window screen repair can cost anywhere from \$10 to \$120 for minor holes and up to \$350 per window for large damage or replacement. Windows can vary in cost for repair depending on factors such as panes and labor costs. Single-pane windows are typically cheaper (\$80-\$200) compared to double-pane ( \$180-\$400), triple-pane/bay window ( \$500-\$1,000), and four+ pane/bow window ( \$1,200-\$3,200). Repairing a lost gas filler and replacing glass can cost between \$100-\$600 per window. The repair cost also depends on the type of window. Small transom and fixed picture windows are less expensive to fix, while egress and garden windows are more costly. Factors that influence the cost include window size, frame material, number of panes, damage level, accessibility, and emergency repairs. A professional labor charge can range from \$45-\$90 per hour for a repair service, with handymen charging slightly higher (\$50-\$80). Simple DIY repairs like caulking, screen replacement, or lubricating hardware can save money. However, if your windows are more than 15 years old or require extensive repairs, replacing them might be more cost-effective. In most cases, window repairs fall within the \$175-\$600 range and offer significant savings compared to new window installation (averaging \$500-\$2,000). Simple repairs such as replacing a screen or caulking around a window can be done in about half an hour to several hours, depending on the complexity of the job. For more intricate fixes like fixing a broken window, you might need several hours for ground floor windows and even longer for those on higher floors. To save money on window repairs, consider doing simple tasks yourself or shop around for professional help at competitive prices. However, neglecting to fix a cracked window can lead to additional damage, increased electricity bills, potential harm to children and pets, and decreased property values. When choosing a window repair service, select licensed, bonded, and insured companies, compare estimates carefully, read reviews from previous customers, and request all details in writing before starting the project. Additionally, consider asking important questions such as how long they've been repairing windows, what type of repair your window needs, if it's worth repairing or replacing, and their payment terms.
