To download Amazon Prime movies for offline viewing, follow these steps: For rented/purchased movies, go to Video Library > Movies or TV Shows and select the movie you want to download. Tap Download from the menu on the right. If your device has an SD card installed, choose where you want to save the video. Select one of four file size options: Best, Better, Good, or Data Saver. The lower the quality, the less data is used. For movies included with Prime, open the app and select the video, then tap Download from the video details page. Follow the prompts. Make sure your device is Amazon-compatible: Kindle Fire tablets (except 1st generation), Android, iOS, macOS, or Windows 10. You've installed the Prime Video app and want to start downloading content for offline viewing. This feature is now available on both Mac and Windows, allowing you to access your favorite shows and movies without an internet connection. To get started, you'll need to download the desktop app from the Amazon website and sign in. Once you're logged in, browse to find the movie or TV show you want to download, and click the "Download" button at the top of the page. You can also choose to download individual episodes or entire seasons. To manage your downloads, go to the "Downloads" tab in the bottom tab bar. Here, you can see a list of shows you've already downloaded or the progress bar for any current downloads. Once a download is complete, you can disconnect from the internet and watch content offline without signing back in. By default, Prime Video will download high-quality video files. However, if that's taking too long or using up too much space on your device, you can adjust the download quality by selecting "Good" for faster downloads or "Better" for medium quality videos. You can also customize additional settings, such as whether to automatically download audio tracks in your preferred language and how many episodes to download at a time. Unfortunately, downloaded content on Prime Video comes with limitations due to restrictions on content rights. Once downloaded, you have only 30 days to start watching the video, followed by a 48-hour window to finish it. If you exceed this time limit, the download expires, and you need to re-download the content. Additionally, downloads may not work when connecting to the internet in another country, except for Amazon Originals which are more likely to be accessible globally. Third-party content, however, might not be as easily accessible. Despite these limitations, downloading Amazon Prime movies allows offline viewing or playback on different devices without an internet connection, making it useful for travel or areas with limited internet access. Now, let's move on to the step-by-step guide on how to download Amazon Prime movies to a USB flash drive. 1. Find content to download by browsing options or using the search bar. 2. Check the details page for information like plot and user ratings. 3. Select the desired video quality for download. 4. If available, click the "Download" button. 5. Download a USB flash drive with sufficient storage capacity beforehand. 6. Connect and install the USB flash drive by following on-screen instructions. 7. Transfer the downloaded content to the USB flash drive by copying it from the computer's downloads folder. Given article text here the device first, then select Paste from the context menu. Alternatively, you can also drag and drop the downloaded file directly into the Windows explorer window. The file transfer process will begin, and the time required will depend on the size of the file and the speed of your USB device. Once the transfer is complete, safely unplug the USB device from your computer. Right-click on the device icon and select Unplug. Wait for the notification that it is safe to remove the device. It's very important to ensure that the transfer is fully completed before safely unplugging the USB device. Interrupting the transfer process prematurely may result in data loss or corruption. Now that you've successfully transferred the movie or TV show to the USB device, it's time to proceed to the final step and safely remove the USB device. Step 5: Safely unplug the USB device After transferring the movie or TV show to the USB device, it's very important to safely unplug the device from your computer to prevent data loss or corruption. Follow these steps to safely unplug the USB device: Make sure all file transfer processes involving the USB device are complete before proceeding. Locate the USB device icon on your computer's taskbar or system tray. It may appear as a removable device or with a unique name. Click on the USB device icon to open the menu. Select Unplug or Safely Remove from the options listed. This will notify your computer that you want to disconnect the USB device. Wait for a confirmation message that it is safe to remove the device. Gently pull the USB device out of the USB port of your computer. Safely unplugging the USB device ensures that all data transfers have been completed and that no files are in use or at risk of losing data integrity. Failure to properly unplug the USB device may result in file corruption or data loss. Now that you've safely unplugged the USB device, you can use it to watch the movie or TV show on any compatible device with a USB port.
