A guide to the new agony infusion slot and the updated agony resist system updated with GW2’s Fractured patch. Agony infusion slot Agony infusion slot is a new slot on infused Ascended items (rings and backpieces only). This slot is specifically for agony infusions, which is a new type of infusion introduced with this update that only goes into the Agony Infusion slot. Infusions from from previous updates cannot go into this slot. If you have infused your ring/backpiece before this update, you will have a +5 agony infusion already in this slot. If you infused your ring/backpiece after this update, this slot is now empty. It is important to differentiate between the term agony infusion and agony resist but sometimes you can get more from the chest. These infusions tradeable and can be purchased from the Trading Post as well. At a minimum you should get at least four +1 agony infusions from a full fractal run. To upgrade agony infusions, you will need have an artificer 100 level character. Place two identical agony infusions together with Thermocatalytic Regeant (purchased from the Master Artificer, 10 for 15 silver) to upgrade them a single infusion of the the next tier. For example, you can put two +1 agony infusions together to make a single +2. You can put two +3 agony infusions together to make a +4. There is no limit to how high you can go but it gets to a crazy amount after a while. Here is a chart showing you how many +1 agony infusions you need to make an agony infusion of a given stat. Those more observant will notice that the number of +1 agony infusions you need doubles for each agony resist you gain. The formula is 2^(n-1)where n is the agony resist number. Since there isn’t a way to extract an agony infusion out of an item once you put it inside, you will need to start over if you use an agony infusion on an item. The highest agony resist infusion crafted so far ingame is +12. The highest sold on trading post right now is a +11 agony infusion for 250 gold. (Nov 28, 2013) Agony resist Number of +1 agony infusions +1 1 +2 2 +3 4 +4 8 +5 16 +6 32 +7 64 +8 128 +9 256 +10 512 +11 1024 +12 2048 +13 4096 +14 8192 +15 16384 Getting Agony Resists Before you spend your gold on agony infusions, deck out all of your ascended gear with Versatile Simple Infusion sold from the vendor inside the Fractal of the Mists. It costs 75 Fractal relics each and give you +5 Agony resist. You have 7 Ascended pieces so you will need 75×7 = 525 relics in total if you want to outfit all of your ascended pieces with them. If you have infused your backpiece and rings before the patch, then your agony infusion slots should be already fitted with +5 agony infusion. This will add +5 agony resist per slot or +15 agony resist in total. This means you can have 55 agony resist total after you have decked out all of the Ascended slots with Versatile Simple Infusion. If you havn’t infused them pre-patch, then you will only have 40 agony resist in total. Item Agony resist Backpiece 5-10 Ring 5-10 Ring 5-10 Accessory 5 Accessory 5 Amulet 5 Weapon 10 Total 40-55 A rule of thumb for how much agony resist you need to survive at full health is Fractal level -5. The amount of agony resist you need increase every 5 levels. So starting from fractal level 10 you will want 5 agony resist (10-5) to not die to agony. This is the minimum amount of agony resist you need, which means you will still take damage from agony. If you want to completely minimize the amount of agony you take, you should aim for the amount of agony resist that is fractal level +10. So for a level 30 fractal having 40 agony resist should make agony a minor annoyance. At level 50, which is currently the max cap for fractals, you will need 70 agony resist due to the mistlock instability which frequently inflicts your party with agony. The post GW2 Agony infusions slot and agony resist guide appeared first on Dulfy. Полностью From Guild Wars 2 Wiki Jump to navigationJump to search When you look at equipment, there are a lot of different varieties in Guild Wars 2. They range from typical armor sets to stat boosters such as trinkets. While lower tier items have less use, the higher the quality, the more they become helpful for players, particularly when you hit the end game of Guild Wars 2. Once you’ve acquired your end-game armor, you’ll need to make sure that it’s equipped with the correct stats and infusions. There are two main types of Infusions in Guild Wars 2: Agony Infusions and Attribute Infusions. Screenshot via ArenaNet Agony infusions are used to provide players with the Agony Resistance attribute. While this has little to no use in the Open World, it is vital in the Fractals of the Mists. Agony is a mechanic that deals damage and reduces healing received to players over time. Therefore, having a high degree of Agony Resistance will lower the amount of damage your character takes. Agony Infusions can provide between +1 to +30 Agony Resistance and can be upgraded through the Artificer profession or by trading with INFUZ-5959, which is located in the Fractals of the Mists. Agony Infusion upgrades can be purchased for a gold price as well as +1 Agony Infusions which you’ll be able to obtain by completing lower-level Fractals. Of course, the higher the purchase level and the higher the level you want to craft, the more the cost goes up. Screenshot by Gamepur To Infuse an item, you’ll need to make sure that you first have the Infusion you wish to equip in your inventory. You’ll also need to ensure that your current equipped gear has slots for the Infusion open, which you’ll see by hovering over the equipment and looking for an Unused Infusion Slot. Open the Hero panel by pressing H and clicking on equipment. That will show you all available items you can use on your character. Next, you’ll want to double-click your Infusion or right-click and select Use from the drop-down menu. From there, accept the prompt, and it will automatically assign itself to your chosen item. If you’ve made a mistake, it’s possible to remove the Infusion by purchasing an Infusion Extraction Device, also purchasable from INFUZ-5959. These cost 24 silver and are single-use only. You can also use an Upgrade Extractor; however, these are only obtainable through the Black Lion Gem Store and its currencies. Gamepur is supported by our audience.
