Xertra

Litepaper 2026

The evolution of Stratis into a connected Web3 ecosystem for gaming, DeFi, payments, onboarding, interoperability and scalable blockchain infrastructure — powered by STRAX.

01 — INTRODUCTION

From Stratis to Xertra

Xertra represents the next evolution of Stratis — a blockchain project established in 2016 with a mission to make decentralized technology more practical, accessible and useful.

Stratis built the foundation: a long-standing blockchain network, smart-contract infrastructure, developer tooling and a growing product ecosystem.

Xertra builds on that foundation with a clearer, product-led identity focused on **gaming, DeFi, payments, digital ownership, onboarding** and scalable Web3 infrastructure.

The rebrand does not replace the Stratis legacy. It brings the network, the **STRAX** token and the ecosystem products together under a stronger, more accessible brand.

02 — THE VISION

The Xertra Vision

Xertra's vision is to make Web3 easier to access, easier to build on and easier to use.

The ecosystem combines blockchain infrastructure, gaming, DeFi, identity, payments, digital ownership and developer tooling into one connected platform powered by STRAX.

Rather than focusing only on blockchain infrastructure, Xertra is designed around real products and practical adoption.

03 — THE PROBLEM

The Adoption Problem

Web3's hardest problem is no longer technology — it is adoption.

- ◆ Web3 onboarding remains too complex for mainstream users.
- ◆ Wallet setup, seed phrases and external browser extensions create friction.
- ◆ Gas fees make games and consumer applications feel clunky.
- ◆ Developers need faster ways to deploy scalable blockchain infrastructure.
- ◆ Games need user-friendly identity, wallets, asset ownership and transaction flows.
- ◆ DeFi applications need liquidity, interoperability and low-cost execution.
- ◆ Businesses need compliant payment and settlement infrastructure.
- ◆ Digital ownership needs to work across useful products, not isolated marketplaces.

The Xertra Technology Stack

A layered stack built for real products — from Layer 1 to gasless user experiences.

01 STRAX Network

The Layer 1 foundation of the Xertra ecosystem, used for transactions, staking, smart contracts and network utility.

02 EVM Compatibility

Enables developers familiar with Solidity and Ethereum tooling to build within the Xertra ecosystem.

03 Xertra Deploy

A simplified way to deploy scalable, ZK-powered blockchain environments.

04 Xertra Passport

Identity, account access and wallet abstraction for users across Xertra products.

05 Xertra Zero

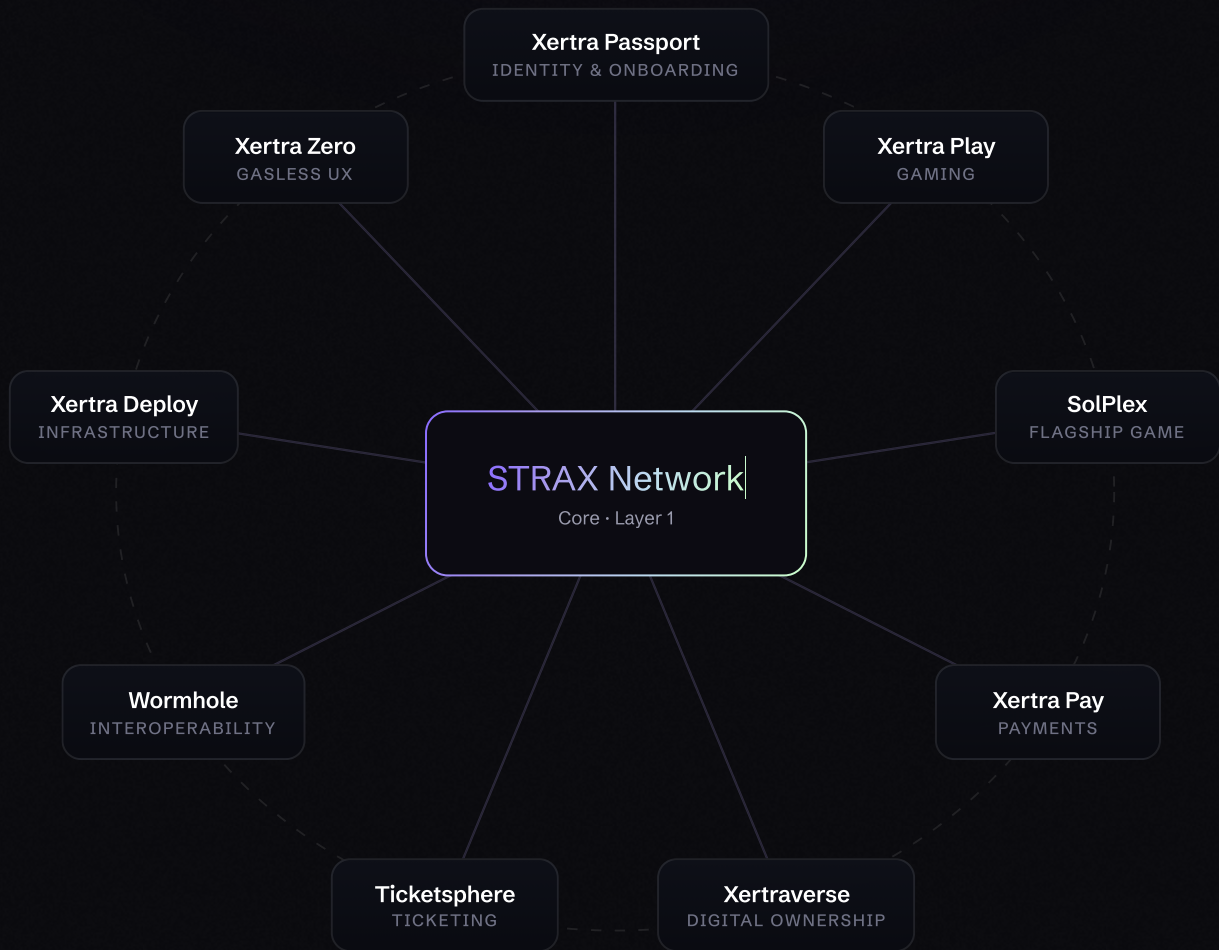

Removes friction by supporting gasless interactions and smoother Web3 user experiences.

06 Xertra Dashboard / Console

A central access point to ecosystem products, wallets, services and tooling.

The Xertra Ecosystem

Identity, gaming, scalable infrastructure, payments, DeFi, interoperability and digital ownership — one connected ecosystem with the **STRAX Network** at its centre.

Supported by StraxSwap · Staking & Launchpad · Xertra Explorer · Dashboard / Console

Product Suite

Twelve live and emerging products, one connected ecosystem. (1 of 2)

01

Xertra Passport

Identity and onboarding; wallet access through a familiar account experience.

02

Xertra Dashboard

Central access point for users and developers: Passport, wallet, links and services.

03

Xertra Play

Gaming discovery and engagement with STRAX-powered gameplay mechanics.

04

Xertra Deploy

Launch scalable, ZK-powered blockchain environments for games and DeFi.

05

Xertra Zero

Gasless, low-friction interactions that remove a major barrier to adoption.

06

Xertraverse

Digital ownership and NFT marketplace for assets, collectibles and in-game items.

Product Suite continued

Gaming, payments, interoperability and DeFi. (2 of 2)

07

Xertra Pay

Crypto-to-fiat payment and settlement; formerly Stratis Money Services.

08

SolPlex

Xertra's flagship Web3 strategy game; strategy gameplay, digital assets and token utility.

09

Ticketsphere

Blockchain ticketing: secure, transparent and flexible event access.

10

Wormhole

Cross-chain interoperability and bridging to supported external networks.

11

StraxSwap

Decentralized exchange for token trading, liquidity and DeFi activity.

12

Staking / Launchpad

Stake STRAX to help secure the network and earn rewards.

Explore the Xertra Ecosystem

The Xertra ecosystem is accessible through a growing suite of live products and platforms.

● Xertra Website	https://www.xertra.com
● Dashboard / Passport	https://dashboard.stratisplatform.com
● Xertra Play	https://play.xertra.com
● Xertra Deploy	https://deploy.xertra.com
● Wormhole	https://wormhole.xertra.com
● SolPlex	https://solplex.com
● SolPlex (Epic Games)	https://store.epicgames.com/p/solplex-a72c24
● Staking Launchpad	https://launchpad.stratisevm.com

Use Cases

Product-led applications of the Xertra ecosystem across gaming, finance and infrastructure.

- ◆ **Web3 Gaming:** Xertra Play, SolPlex and Passport deliver simplified onboarding, embedded wallets, digital ownership and STRAX-powered gameplay.
- ◆ **Scalable Deployment:** Xertra Deploy launches scalable, ZK-powered environments for games, DeFi and high-volume products.
- ◆ **Gasless Experiences:** Xertra Zero reduces or removes gas-fee friction for everyday interactions.
- ◆ **Crypto Payments:** Xertra Pay supports crypto-to-fiat flows while reducing exposure to volatility.
- ◆ **Cross-Chain Interoperability:** Wormhole connects Xertra to the wider Web3 ecosystem.
- ◆ **Digital Ownership:** Xertraverse lets users own, trade and use digital assets across products.
- ◆ **Event Ticketing:** Ticketsphere applies blockchain to issuance, access control and fraud prevention.
- ◆ **DeFi & Liquidity:** StraxSwap, staking and DeFi tools support token utility and liquidity.

STRAX Utility & Tokenomics

STRAX is the native token powering the Xertra ecosystem — used for transactions, staking, governance, ecosystem participation and product utility.

- ◆ **Network Fees:** pay transaction fees and interact with the underlying network.
- ◆ **Staking & Network Security:** stake STRAX to help secure the network and earn rewards.
- ◆ **Governance:** participate in the future direction of the ecosystem.
- ◆ **Ecosystem Utility:** used across Xertra products including gaming, DeFi and applications.
- ◆ **Gaming Utility:** in Xertra Play, connected to gameplay — free plays, additional plays and burn-based models.
- ◆ **DeFi Utility:** trading, liquidity and DeFi activity through products such as StraxSwap.

Xertra Roadmap

Where the ecosystem is heading next.

- ◆ Expand Xertra Passport across all ecosystem products
- ◆ Continued development of Xertra Play
- ◆ Integrate additional games into the ecosystem
- ◆ Grow SolPlex and wider game distribution
- ◆ Continued rollout of Xertra Deploy
- ◆ Expand ZK-powered deployment tools
- ◆ Roll out Xertra Zero for gasless interactions
- ◆ Grow Xertraverse and marketplace functionality
- ◆ Expand Xertra Pay and regulated payment infrastructure
- ◆ Deepen Wormhole cross-chain integration
- ◆ Expand staking, liquid staking and DeFi utility
- ◆ Improve developer access via Dashboard / Console
- ◆ Continued ecosystem partnerships and integrations

12 — CONCLUSION

The Next Chapter

Xertra is the next evolution of Stratis — bringing together nearly a decade of blockchain development, a live STRAX-powered network and a growing suite of products across gaming, DeFi, payments, infrastructure, interoperability and digital ownership.

The rebrand provides a clearer identity for the ecosystem while preserving the foundations that made Stratis a long-standing blockchain project.

Stratis built the foundation. Xertra brings the products, users and ecosystem together.
