

Secure bank payments with instant confirmation

iDEAL | Wero allows customers to make secure online payments directly from their bank accounts without using a credit or debit card. Introduced in 2005, iDEAL has become the leading online payment method in the Netherlands, offering customers a familiar and convenient way to pay through participating banks.
As iDEAL gradually transitions to Wero, a European payment solution developed by the European Payments Initiative (EPI), the payment experience is evolving toward a broader European network. For merchants, iDEAL | Wero offers a secure alternative to card payments, fast payment confirmation, and a streamlined checkout experience.

Why offer iDEAL | Wero?

iDEAL | Wero is the leading online payment method in the Netherlands, accounting for approximately 70% of Dutch e-commerce transactions.

Merchants receive payment confirmation once the customer authorizes the transaction, allowing orders to be processed without unnecessary delays.

Customers pay directly through their participating bank or supported payment app, without entering credit or debit card details.
