

RAW GROUP GLOBAL SOURCING LIMITED

August 2026

In alignment with Primark's Supplier Environmental Standards and our commitment to responsible business practices, Raw Group has established a science-aligned greenhouse gas (GHG) reduction target covering our Scope 3 Category 1 (Purchased Goods & Services) and Category 4 (Upstream Transportation) emissions.

Our Target

- **Baseline year:** 2025
- **Baseline emissions** (Category 1 + 4): 258.64 tCO₂e
- **Target:** 25% absolute reduction by 2030

Should our production volume or business scale increase in the coming years, we remain committed to maintaining this 25% reduction rate against the 2025 baseline. This ensures that growth does not compromise our decarbonisation trajectory.

Coal-Free Commitment Raw Group confirms that no coal is used in any owned or contracted Tier 1 or Tier 2 manufacturing sites involved in the production of Primark products. We will continue to uphold a coal-free supply chain.

Pathways to Achieve the Target We will pursue a multi-lever approach to deliver the required reductions, including but not limited to:

- Transitioning to renewable energy sources across our operations and encouraging the same within our key manufacturing partners
- Improving energy efficiency in production and office facilities
- Engaging closely with our primary manufacturing partner (UGL) to reduce the production based carbon intensity of garments
- Optimising logistics and reducing air freight where feasible
- Increasing the use of lower-impact and preferred materials
- Continuous improvement in data quality and supplier collaboration

This target supports the ambition of the SBTi Net Zero Standard and the Paris Agreement goal of limiting global temperature rise to 1.5°C above pre-industrial levels.

We will monitor progress annually and publicly report on our performance as part of our ongoing commitment to transparency and continuous improvement.
