CardioScan

Male

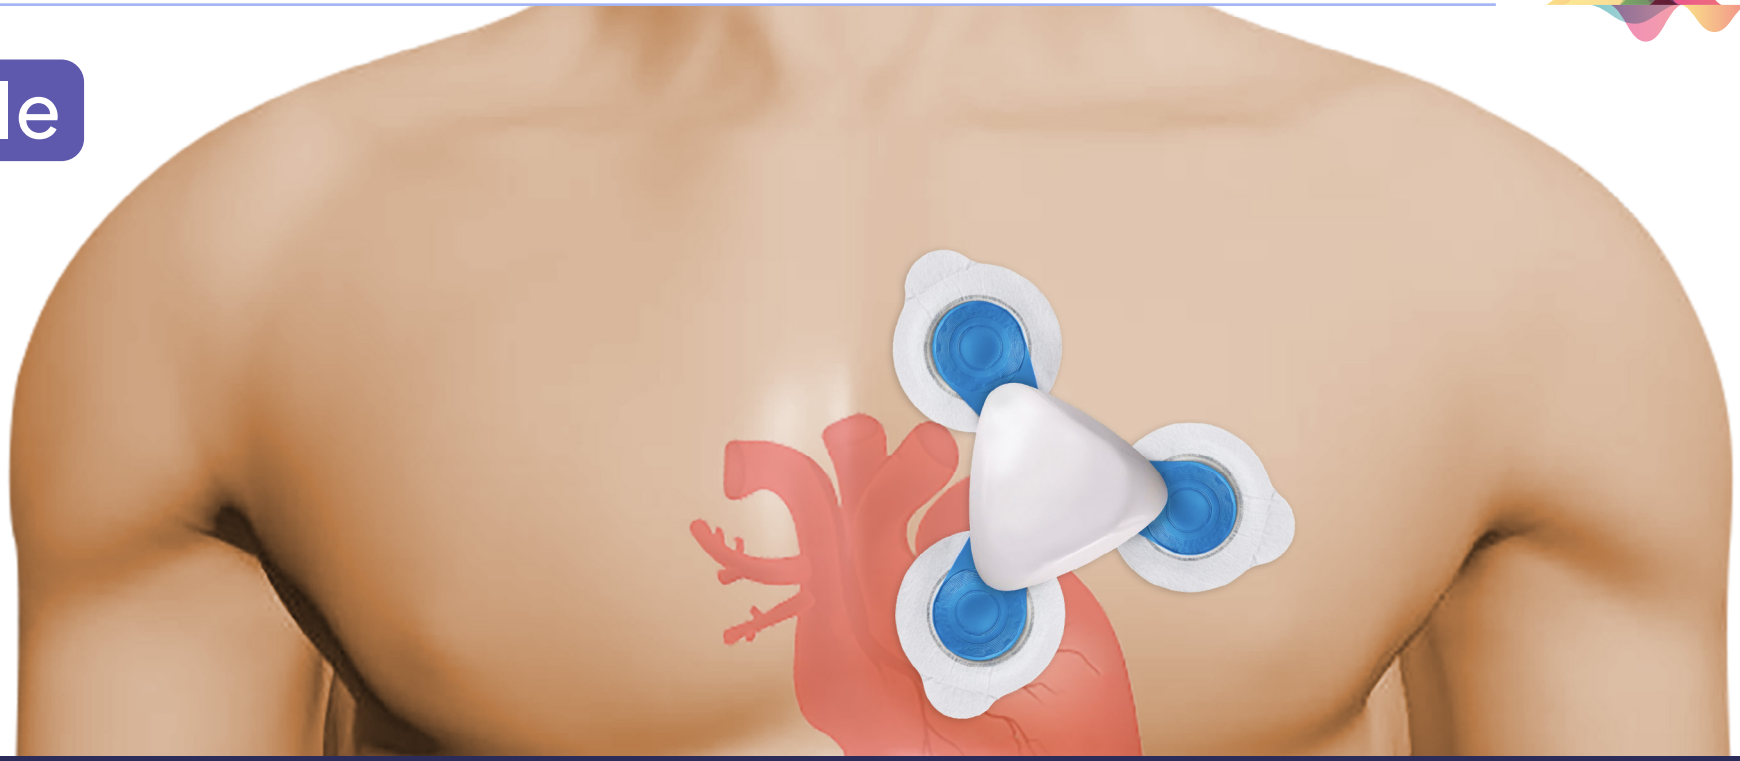

Recommended Position: Middle rib cage

Notes on Positioning

- Position the electrodes according to the picture.
- Make sure that the electrodes are not positioned too high, the lower electrodes should be positioned as close as possible to the horizontal heart axis.

CardioScan

Male

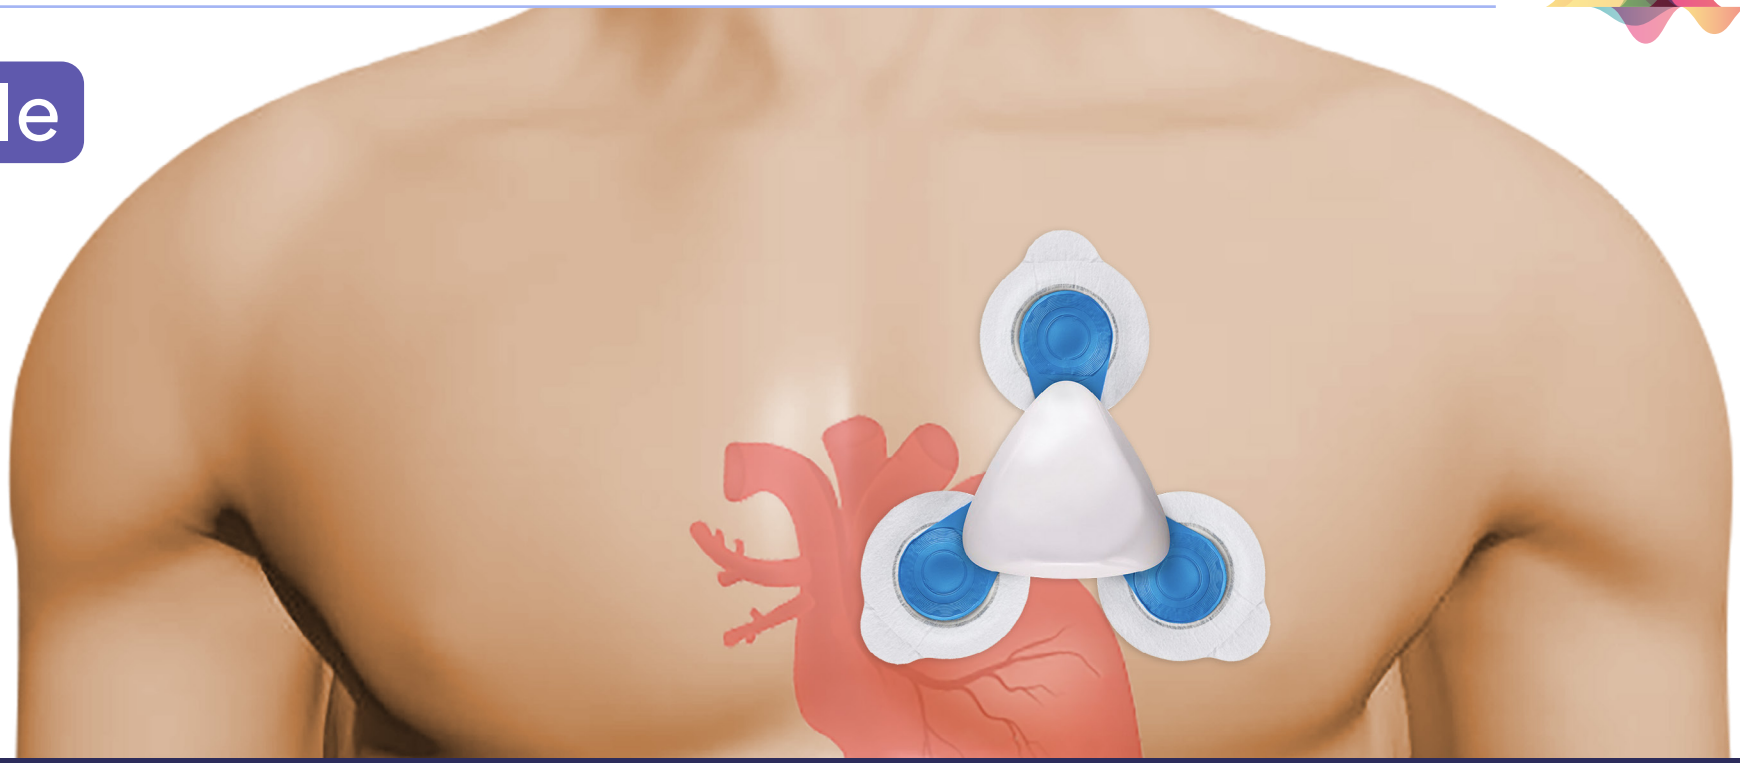

Alternative Position One

Notes on Positioning

- Position the electrodes according to the picture.
- Make sure that the electrodes are not positioned too high, the lower electrodes should be positioned as close as possible to the horizontal heart axis.
- When placed on the left chest: Make sure that the electrodes are not positioned too far to the left, the right electrode should be placed as close as possible to the sternum.

CardioScan

Male

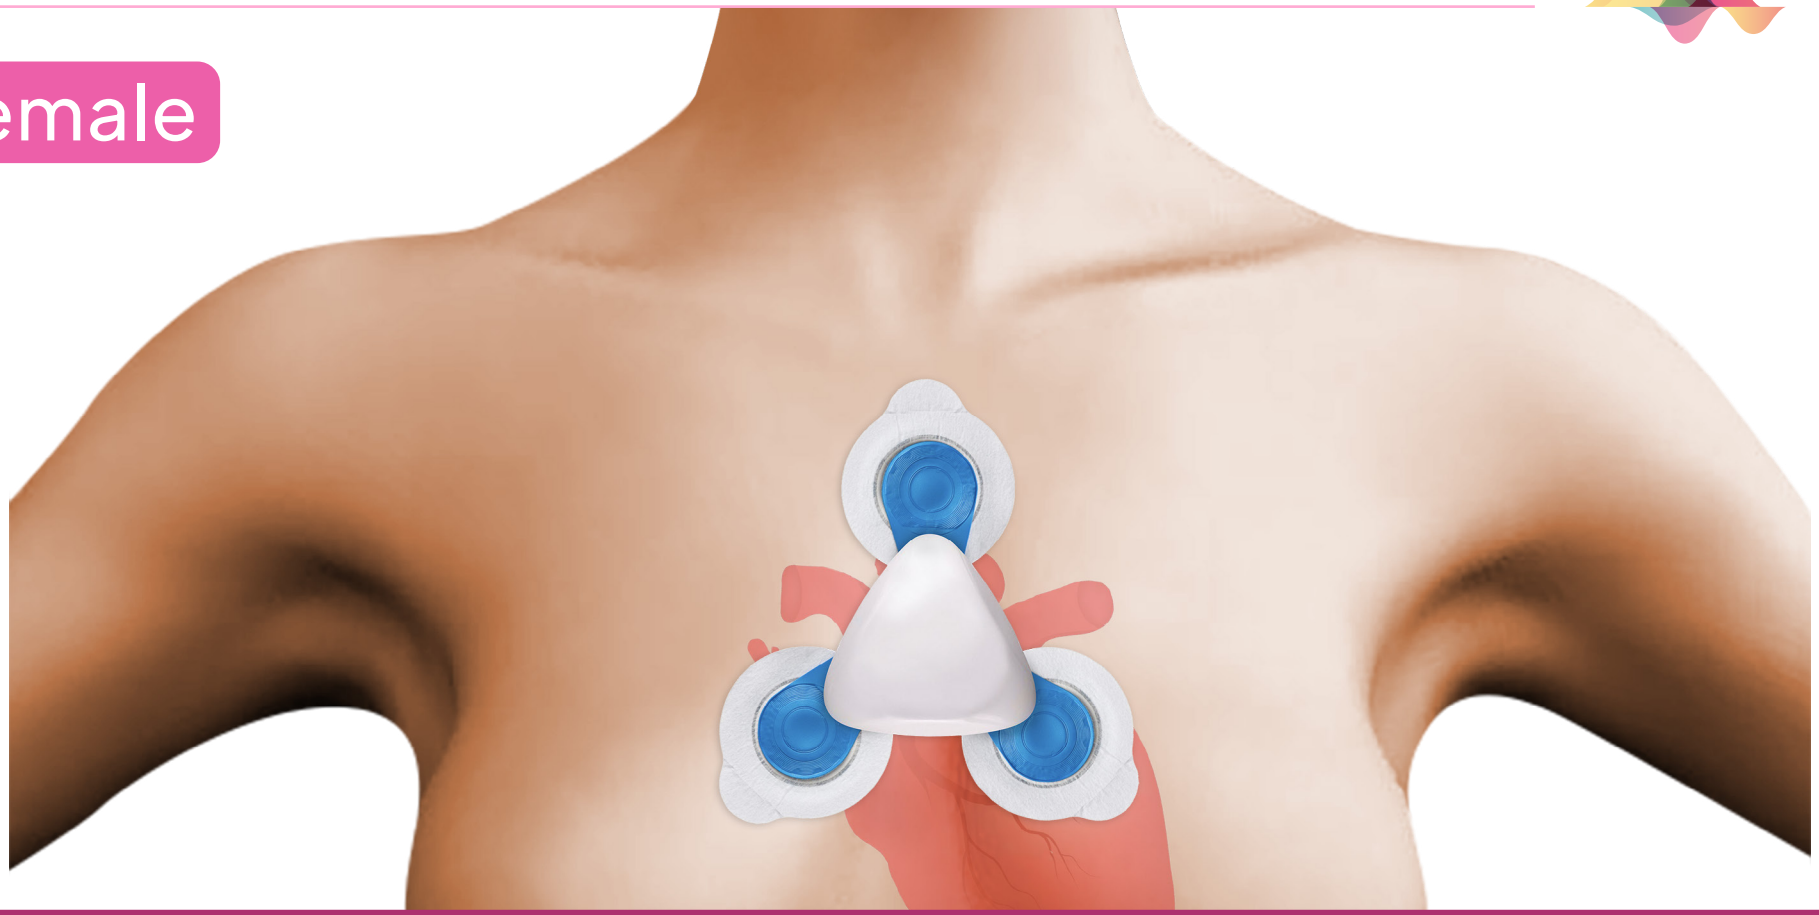

Alternative Position Two

Notes on Positioning

- Position the electrodes according to the picture.
- Make sure that the electrodes are not positioned too high, the lower electrodes should be positioned as close as possible to the horizontal heart axis.
- When placed on the left chest: Make sure that the electrodes are not positioned too far to the left, the right electrode should be placed as close as possible to the sternum.

CardioScan

Female

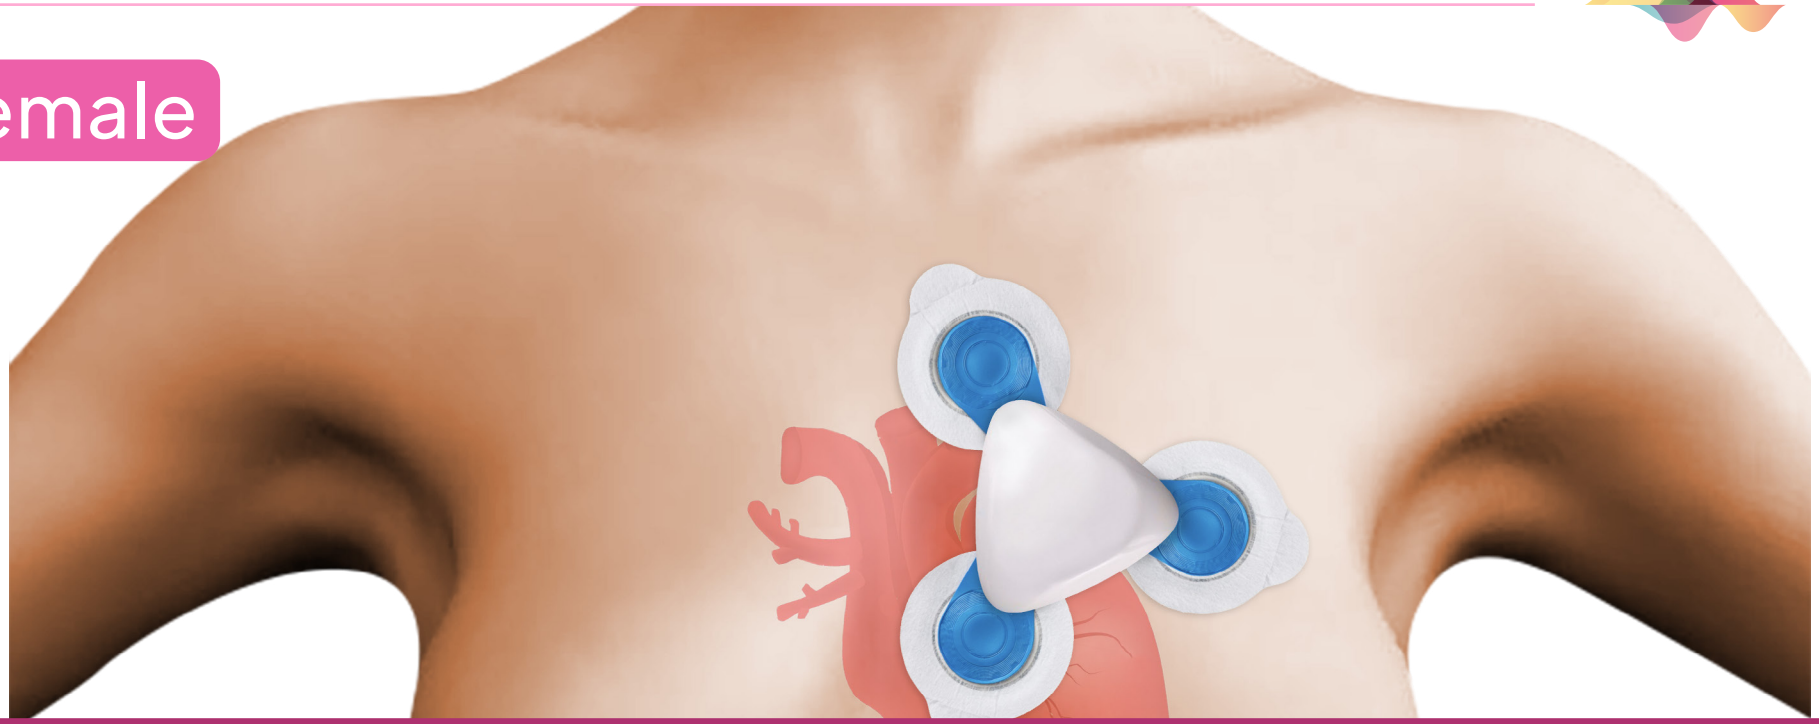

Recommended Position: Middle rib cage

Notes on Positioning

- Position the electrodes according to the picture.
- Make sure that the electrodes are not positioned too high, the lower electrodes should be positioned as close as possible to the horizontal heart axis.
- Positioning is the same for all breast sizes.

CardioScan

Female

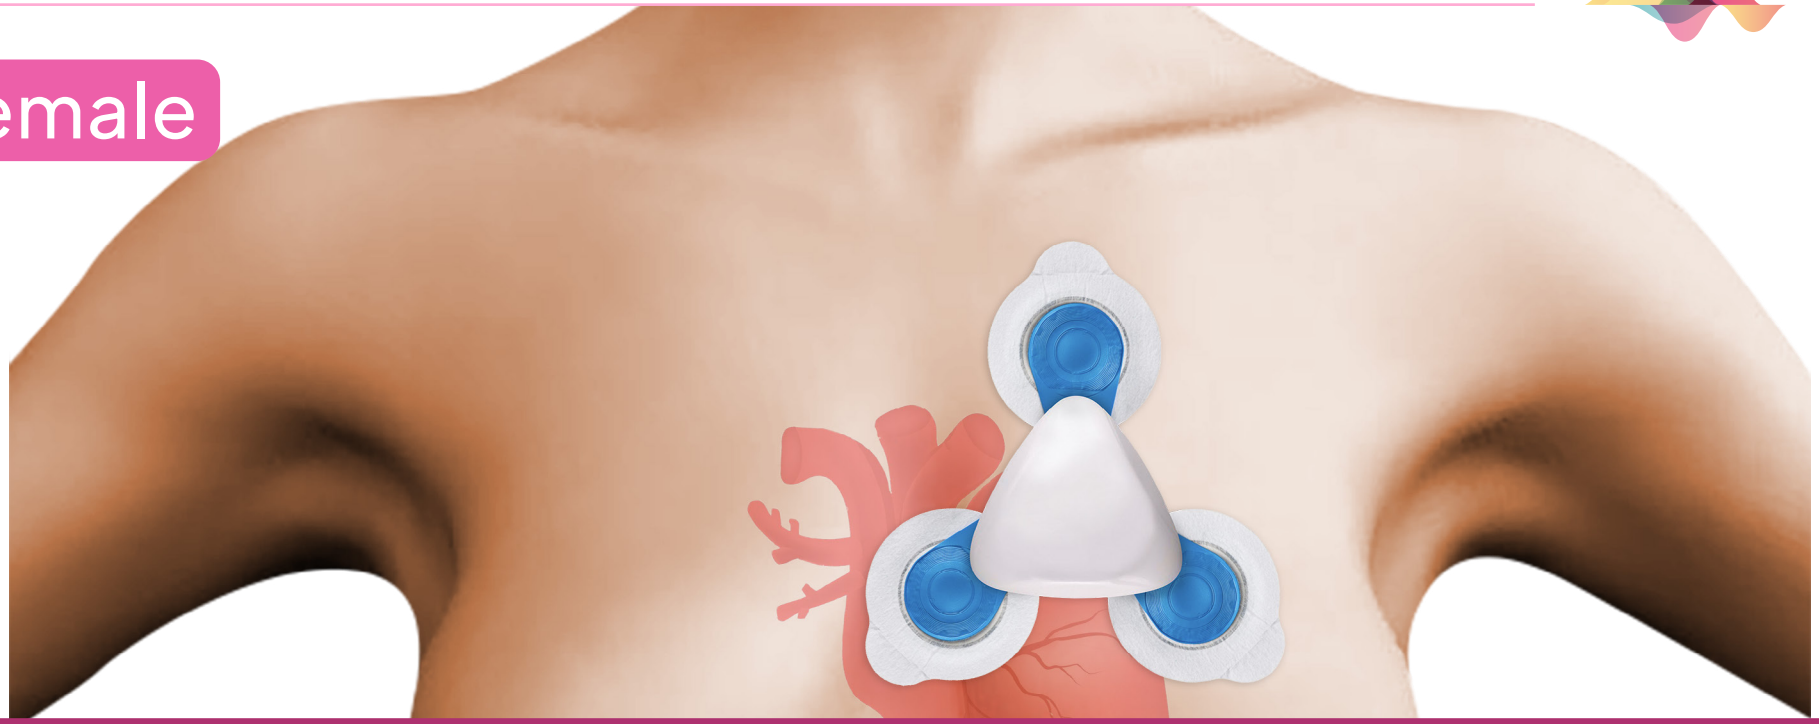

Alternative Position One

Notes on Positioning

- Position the electrodes according to the picture.
- Make sure that the electrodes are not positioned too high, the lower electrodes should be positioned as close as possible to the horizontal heart axis.
- When placed on the left chest: Make sure that the electrodes are not positioned too far to the left, the right electrode should be placed as close as possible to the sternum.
- Positioning is the same for all breast sizes.

CardioScan

Female

Alternative Position Two

Notes on Positioning

- Position the electrodes according to the picture.
- Make sure that the electrodes are not positioned too high, the lower electrodes should be positioned as close as possible to the horizontal heart axis.
- When placed on the left chest: Make sure that the electrodes are not positioned too far to the left, the right electrode should be placed as close as possible to the sternum.
