

elo^{AI} Overview

Meet elo^{AI} - Your intelligent data companion inside Elosity®

Built-In Knowledge. Continuous Learning. Better Decisions.

elo^{AI} is part of Elosity, Endpoint's fifth-generation RTSM platform. elo^{AI} enables clinical teams to interact with RTSM data using natural language, delivering real-time answers, insights, and visualizations directly within Elosity while preserving study blinding, role-based access, and regulatory integrity. By moving beyond static reports, elo^{AI} brings insight into the flow of day-to-day trial operations.

Intelligence built into everyday workflows

elo^{AI} extends beyond data insight by providing an embedded knowledge layer that helps users understand how the platform operates directly within their workflow. Users can ask natural language questions about system behavior, configuration logic, and operational processes, and receive clear, contextual answers in real time without leaving the platform.

What this enables:

- **Faster** onboarding without reliance on static training materials
- **Reduced** dependency on support teams for routine how-to questions
- More **consistent** platform usage across teams and studies
- Better-informed **decisions** aligned to system design and study requirements

"By making platform knowledge accessible in the moment, elo^{AI} reduces friction between learning and execution. This supports continuous training, improves user confidence, and helps teams operate with greater consistency and quality."

elo^{AI} Capabilities

Chat with Your Data

Ask questions the way you think and get answers instantly.

Chat with Your Data allows users to query live RTSM and supply data using natural language, returning clear, actionable responses in real time. Insights are delivered in both narrative and visual form, making it easier to understand trends, risks, and study dynamics as they emerge.

What this enables:

- **Real-time** answers without custom reports or manual exports
- **Faster** understanding of study and supply performance
- Broader access to **insight** across technical and non-technical users

Dynamic, on-demand visualization

From questions to clarity, instantly.

elo^{AI} automatically generates charts and visual summaries in response to user queries, allowing teams to explore data interactively and validate assumptions on the fly. Visuals update dynamically as questions evolve, supporting deeper analysis without leaving the platform.

Secure, blinding-aware intelligence

Designed for the realities of clinical trials.

elo^{AI} operates within Elosity's security and blinding framework, ensuring users only see what they are permitted to see across data views, visualizations, exports, and notifications. This allows teams to leverage AI-driven insight without compromising trial integrity or compliance.

Why elo^{AI} matters?

Clinical trials generate enormous volumes of operational and supply data, but insight only matters when it is timely and usable.

elo^{AI} shortens the distance between question and answer, helping teams respond faster, operate more confidently, and focus on patients rather than processes.

elo^{AI}-powered workflow capabilities

1 **User Import**

Simplify access. Strengthen oversight.

User Import streamlines onboarding of study users from existing systems or new teams by centralizing user data and access management across studies and programs. elo^{AI} supports automated data validation, integrity checks, and role matching, reducing administrative effort and improving consistency.

What this Enables

- **Faster** user onboarding across studies
- **Centralized** visibility into roles and permissions
- **Reduced** errors and manual setup effort

2 **Site Import**

Bring sites online faster, with confidence.

Site Import accelerates study startup by enabling rapid onboarding of new or existing sites while maintaining centralized site data across studies. elo^{AI} assists with data review, integrity checks, and intelligent matching to help ensure accuracy and consistency at scale.

What this Enables

- **Quicker** study setup and site activation
- Cross-study **visibility** into site data
- **Reduced** rework and administrative overhead

▶ **elo^{AI} as an intelligent ecosystem**

elo^{AI} is not a single feature. It is an embedded intelligence layer within Elosity that supports users and operational teams across the study lifecycle.

▶ **Where elo^{AI} fits**

elo^{AI} is embedded directly within Elosity's modern RTSM architecture, supporting intelligent data access, automation, and guidance across study build, execution, and supply operations. As trial complexity grows, elo^{AI} enables teams to work more efficiently, consistently, and confidently within the platform they already use.

Who benefits:

▶ **Clinical operations teams**
gain faster answers and real-time visibility

▶ **Study teams**
reduce setup friction and administrative effort

▶ **Supply teams**
uncover drivers behind inventory and distribution behavior

▶ **Decision-makers**
move from reactive reporting to proactive insight

Turn RTSM data into answers

Ask better questions. Get answers instantly.

Discover how elo^{AI} brings real-time insight directly into your workflow.
