HBOT

Hyperbaric Oxygen Therapy embraces the regenerative powers of oxygen for healing, recovery and improving overall well-being.

Healing Power of Oxygen Therapy

The regenerative powers of oxygen has been embraced through **Hyperbaric Oxygen Therapy (HBOT)** to treat injuries and disease disorders, increase longevity, boost overall wellness and reverse the biological markers of aging.

How Does It Work?

Inside a hyperbaric chamber, increased pressure decreases the size of gas molecules, such as oxygen and nitrogen. This pressure causes oxygen to dissolve directly into the blood plasma independent of hemoglobin/red blood cells.

HBOT typically uses 94% to 100% pure oxygen inside the chamber. By breathing pure oxygen under increased pressure, up to 20X more oxygen travels through the bloodstream to organs and tissues, fueling mitochondria to boost cellular energy. The results include accelerated healing, increased longevity as well as numerous health benefits.

The Benefits of HBOT?

Neurological: HBOT has shown promise in treating neurological conditions such as traumatic brain injury (TBI), stroke, and other neurodegenerative diseases. By increasing oxygen supply to the brain, recovery of brain function can occur through neuroplasticity – the brain’s ability to reorganize and form new connections. This can promote improved cognition and motor function.

Reduced Inflammation:

Chronic inflammation is a common underlying factor in many diseases. HBOT’s anti-inflammatory effects help manage and can reduce chronic inflammation, supporting long-term health.

Cellular Function: Enhanced oxygen availability at the cellular level improves the function of all body cells, fueling mitochondria to produce an abundance of ATP (cellular energy) to support overall health and vitality.

Immune System: HBOT strengthens the immune system by promoting the production and function of white blood cells. This enhances the body’s ability to fight infections and recover from illnesses.

Skin Health: Enhances healing by delivering massive amounts of oxygen to damaged tissues, supporting growth of new skin, blood vessels and connective tissue for proper healing. Boost collagen and reduces inflammation to rejuvenate skin cells, reduce oxidative stress and clear senescent (aging) cells to produce smooth skin and improved complexion.

Enhanced Healing & Recovery:

From surgical wounds to chronic injuries, HBOT can accelerate the healing process. It can support tissue repair, reduces scarring, and improves recovery outcomes.

Performance and Recovery

Athletes and active individuals use HBOT to boost performance and recovery.

- Enhanced Athletic Performance: Improving endurance and strength.
- Faster Recovery Times: Reducing downtime between training sessions.
- Muscle Soreness: Minimizing post-exercise muscle soreness.

- ✓ Accelerated Wound and Injury Healing
- ✓ Enhanced Collagen Production
- ✓ Skin Tone & Texture Improvements
- ✓ Fights Against Aging

Experience Healing with Hyperbaric Oxygen Therapy

Experience the ultimate in relaxation and recovery with the state-of-the-art lounge Hyperbaric Oxygen Chamber.

The soft shell chamber and reclining seat combines advanced technology, performance, comfort, and ease of use for a superior therapy experience.

Take the first step of your journey towards healing with hyperbaric oxygen therapy at **Southern Regenerative and Neurological Wellness**.
