# Ideal Roof and Floor Conditions

# T04S01 – VU / VL Trial

## Loss & Dilution Initiative - VU / VL Parting

- The Ramp 5 Destack (Terrace 04) has been identified as an area to trial a L&D initiative where the interburden between the VU and VL coal is ripped & pushed in place of Through Seam blasted.
- The proposal is to split a coal mining area in half, trialling rip & push on one side, and conventional Through seam blasting on the other. The recovery & dilution of the coal will be studied during the mining.
- Drilling from 140RL to 125RL is currently scheduled to begin on July 22<sup>nd</sup>. Need to commit to the trial by this date.
- Due to coal chasing holes from the 140RL blast, the parting from 140RL to 125RL has already been blasted (see slide 5 & 6 cross sections). This trial will need to occur in the next bench down with a ~85m section on the North of the bench being unblasted from 125RL to 110RL. This will be drilled from the 140RL.
- Based on the July MTP, the trial area will start mining in mid September.

# T04/S01

COAL CODE	STOCKPILE	COMMENTS
C_LL1	SP_B (East)	Back up SP_N
C_LL2B_LL2T	SP_C	
C_VL11_VL12	Waste	

COAL CODE	STOCKPILE	COMMENTS
VU1_VU3	SP_P	Coal North of split line, interburden is un-shot
VU1_VU3	SP_D	Coal south of split line, interburden is shot

Split line is clearly marked on the Topes screen.

C_VL15	E4	Northern Section

# T04/S01 – VL Coal Mining – Only CRS Operators

Coal Code	Destination	Comments
C_VL11_VL12	Waste	
C_VL13	E1	Northern Section
C_VL13	E2	Southern Section
C_VL15	E3	Northern Section
C_VL15	E4	Southern Section

Mine down to the thick waste band at the base of the VL12  
Send to Dump, capture as VL11\_VL12.

Mine out the VL13 and stockpile on the main ROM

Split out the waste band using 80t digger – Send as waste

Mine the VL15 and stockpile separately on the main ROM
