

PROWOOD® KDAT

KILN-DRIED AFTER TREATMENT

**Dry.
Stable.
Ready to
Seal.**

Kiln Dried After Treatment (KDAT) lumber is pressure-treated, then precision-dried in a kiln to remove excess moisture. This results in highly reliable, lightweight, and stable lumber that gets the job done faster.

DURABLE
PROTECTS
PERFORMS

Tough, Stable, KDAT Lumber

Lightweight & Easy to Handle

Drying reduces weight, making it easier to transport, handle, and cut – saving time on the job.

Dimensionally Stable

Kiln-drying minimizes cupping, warping, and twisting, ensuring boards stay true after they're installed.

Seal or Stain Without Delay

No need to wait for the treated wood to dry naturally. KDAT lumber is ready to stain or seal as soon as it's installed.

ProWood® KDAT is building code compliant and backed with a lifetime limited warranty.
