

PROWOOD®

BORATE

Interior Protection That Never Quits.

**DESIGNED FOR INTERIORS.
TOUGH ENOUGH FOR SILL PLATES. GUARANTEED FOR LIFE.**

When you need dependable, code-compliant protection for interior framing, ProWood® Borate-Treated Lumber delivers. It resists rot, fungal decay, and a broad spectrum of wood-destroying insects, including carpenter ants, woodboring beetles and subterranean termites, such as the Formosan subterranean termite. With reliable performance, easy identification, and a lifetime limited warranty, ProWood Borate-Treated lumber gives builders the confidence to frame with materials as tough and consistent as they are.

Confidence in Every Board.

Proven Protection Against Insects and Decay

Borate-treated lumber protects against the threats that compromise interior framing - termites (including Formosan), carpenter ants, roaches, wood-boring beetles, fungal decay, and dry rot - keeping structures sound from the inside out.

Designed for Interior, Above-Ground Applications

Ideal for sill plates, wall studs, ceiling joists, trusses, millwork, and any other interior wood components used above ground and out of contact with water.

Installs Like Untreated Lumber

Nails, cuts, and installs with standard tools - no special fasteners required. Compatible with carbon steel, galvanized steel, copper, and silicon bronze fasteners.

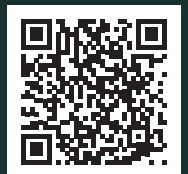

Easy Identification and Lifetime Confidence

Blue dye is added during treatment, which is standard in the industry to make it easily recognizable for inspectors. Every board is backed by a lifetime limited warranty.

ProWood Borate Lumber is backed with a lifetime limited warranty.
