RiskAct Datasheet

Enterprise Risk Intelligence for Regulated Industries

RiskAct by NetraScale delivers predictive risk intelligence that empowers CISOs and Chief Risk Officers to identify threats before they escalate, quantify business impact, and maintain continuous compliance readiness. Purpose-built for highly regulated sectors such as financial services, healthcare, and insurance, RiskAct translates technical vulnerabilities into executive-level risk metrics for critical decisions.

Why RiskAct for Regulated Enterprises

Predictive Risk Intelligence
Move from reactive to proactive with AI-powered threat assessment and risk scoring that identifies emerging risks before they impact operations.

Financial Risk Quantification
Translate cyber risk into business language with automated calculations of Annual Loss Expectancy (ALE) and Single Loss Expectancy (SLE) for informed resource allocation and board reporting.

Regulatory Alignment Built-In
Maintain audit readiness with automated mapping to NIST CSF, FFIEC, SEC cybersecurity rules, and FTC Safeguards—reducing audit preparation time and regulatory burden.

Rapid Deployment
Get value immediately with agentless deployment and minimal infrastructure requirements - no complex integrations or lengthy implementation cycles.

RiskAct: Risk Intelligence Built for Regulated Enterprises

Key Advantages for Regulated Industries:

- Proactive Threat Insight: Anticipate and act on risks before they disrupt your business.
- Business Impact Clarity: Translate technical threats into dollars, decisions, and board-level metrics (ALE, SLE).
- Compliance Confidence: Map risks directly to regulatory obligations for faster, cleaner audits (NIST, FFIEC, SEC, FTC).
- Frictionless Adoption: Deploy without heavy integrations or complex setups.

NIST Cybersecurity Framework Alignment

RiskAct operationalizes the NIST CSF across all five core functions, providing a structured, auditable approach to cybersecurity risk management:

IDENTIFY | PROTECT | DETECT | RESPOND | RECOVER

Who Benefits from RiskAct

Chief Information Security Officers (CISOs)
Gain comprehensive risk visibility, streamline security operations, and communicate cyber risk effectively to executive leadership.

Chief Risk Officers (CROs)
Integrate cyber risk into enterprise risk management frameworks with quantifiable metrics and regulatory compliance evidence.

Compliance & Audit Teams
Reduce audit preparation time with automated regulatory mapping and continuous compliance documentation.

Security Operations Teams
Prioritize remediation efforts based on business impact and automate routine security tasks.
