468.8 kW PV Installation Feedback

ACES Renewables delivered a professional service and adhered to our project dead lines. When we decided to reduce our reliance on grid energy and reduce our carbon footprint, we were looking for a reliable company that understand our needs and design a solar PV system that would best address our energy needs.

ACES Renewables have been a great partner in assisting us to achieve our energy needs and ESG target. We thank the ACES Renewables Team for their expert advice, on-point engineering solutions and excellent project execution. The friendly and professional staff made the experience of installing 468.8kWp of roof top solar on four of our busy sites (GrowthPoint 517, 518, 519 & 520 in Midrand) a pleasant experience with zero disruption to our clients operations.

The team worked safely and kept to our site rules and regulations. We had no interruption and no incidents during the installation except for planned tie-in shutdown which was planned in advance. The workmanship is outstanding and the final outlook of the installation itself is very neat and tidy. The installers kept to the schedule and the installation was completed on time.

The solar PV plants have been functioning well with no problems and has produced 343 201 kWh of electricity from January to July 2024. We recommend ACES Renewables to any company wanting to make use of solar PV energy to decrease reliance on the grid and improve their ESG targets.

Yours faithfully,

Sean Meyer
