FARM ESSENTIALS

CULTIVATING THE FUTURE WITH
CARE

TEAT DIP SOLUTION

Dairy hygiene and disinfectants are vital to ensuring the health and safety of your dairy herd. CattleKit is proud to introduce our comprehensive range of premium dairy hygiene solutions in Pakistan. Our offerings include CIP (Cleaning-In-Place) systems that provide effective disinfection and sanitization of milking equipment. Additionally, our Teat Dip Solutions are specially formulated blends that offer broad-spectrum protection, helping to prevent mastitis and safeguard the health of your dairy animals.

EUROACID PRO

EUROACID PRO is a specially formulated solution of phosphoric acid and nitric acid, designed to efficiently remove mineral deposits from milk lines after milking. This product ensures thorough cleaning, maintaining optimal hygiene and preventing buildup that can affect milking equipment performance.

EUROCLOR PRO

EUROCLOR PRO is a specially formulated solution of sodium hydroxide, designed to effectively remove fat particles and grease from milk lines. This solution helps improve milk quality by ensuring thorough cleaning, maintaining optimal hygiene, and preventing contamination in the milking system.

Lactoguard Concentrated

Lactoguard Concentrated is designed for use as both a pre-dip and post-dip solution, providing essential protection for the udder. This product helps maintain udder health, offering a safeguard against potential infections and promoting overall hygiene during milking procedures.

Lactoguard RTU

Lactoguard RTU is an aqueous solution designed for use as a post-dip treatment. It forms a protective layer around the teat, helping to safeguard against infections and maintain udder health after milking. This solution ensures optimal teat hygiene and protection for your dairy herd.

Farm Essentials

Farm essentials like cow brushes and teat cleaning acids play a crucial role in maintaining herd health and productivity. Cow brushes not only help in grooming and removing dirt but also stimulate blood circulation, reducing stress and promoting overall well-being. On the other hand, teat cleaning acids are vital for ensuring udder hygiene, effectively preventing infections and ensuring clean, safe milk production. Together, these tools are indispensable for any farm focused on animal care, hygiene, and optimal dairy output.

Cow Comfort Brush

The cow comfort brush provides soothing grooming, removes dirt, and stimulates blood flow. Its automatic rotation ensures thorough cleaning and comfort, enhancing overall herd health and productivity.
