

Sterisol Sweden Hand Disinfectant Ethanol

Properties

Ethanol is a liquid, alcohol-based hand disinfectant based on pharmaceutical-grade ethanol, denatured with isopropanol and t-butanol. The product is fragrance-free and contains glycerin, which helps counteract drying of the skin.

Fields of Application

Hygienic Hand Disinfection

The product is suitable for hygienic use in healthcare, the food industry, preschools and any environment where regular hand washing with soap is not possible or sufficient.

Surgical Hand Disinfection

The product should be used in accordance with national or local recommendations for surgical hand disinfection. See also the instructions for use on the next page.

STERISOL ETHANOL Hand Disinfectant

How to use

Hygienic Hand Disinfection

Hands must be clean and completely dry before hand disinfection is performed. Cup one hand and apply at least 3 ml of Sterisol Hand Disinfectant ETHANOL. Rub thoroughly over all areas of the hands for **at least 30 seconds**, or until the disinfectant has evaporated and the skin feels dry again.

Surgical Hand Disinfection

1. Wash hands and forearms with Sterisol Liquid Soap before using Sterisol Hand Disinfectant ETHANOL. Dry hands and forearms completely with a disposable paper towel.

2. Apply a generous amount of Sterisol Hand Disinfectant ETHANOL so that the skin remains wet for **3 minutes**.

3. Ensure that the product covers all surfaces of the hands, wrists and forearms up to the elbow. Massage thoroughly into the skin for at least 3 minutes.

4. Allow the skin to dry completely before putting on gloves.

If gloves are punctured or torn during surgery, they should be removed. The hands may then have become contaminated, and hand disinfection should be repeated according to the instructions above.

Use biocides safely. Always read the label and product information before use.

Highly flammable liquid and vapour. Causes serious eye irritation.
