

AWS Billing Services

D55 are multi-accredited experts in AWS who can optimise your AWS billing for enhanced security and visibility

CloudCheckr

Free access to Cloudcheckr

the market leading reporting analysis and cost optimisation solution, with 10+ years of product experience. Significant saving over purchasing directly – 2.5% list price plus fee

Get proactive recommendations

D55 will come to you with ways to save cost or remediate security issues – and if you agree, we'll act on them for you too

Achieve peace of mind

We practice DevOps, not ClickOps – as soon as you're running in D55's environment, you're benefiting from our preconfigured assistance

Is there a catch?

No. We're a fully accredited and highly experienced (founded 2018) partner of AWS. Many of our customers choose to bill with D55 as a result of the free incentives we're able to offer.

Why do you do it?

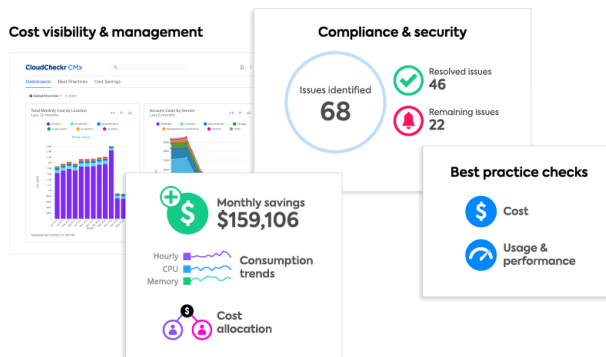

It's important for our partner status with AWS – they very actively encourage this programme so they can trust partners in the ecosystem to help customers to solve problems. It also provides a tighter relationship with our customers, as we know more about their systems and are able to proactively help. And yes, AWS pays us a small margin as a reward for collecting the fees and providing value added services to you. We use this to be able to fund the free services we provide back to you.

Who owns the accounts?

You do! Only the master account, which acts as a container for the billing relationship with AWS, is retained by D55 and we have no access to workloads or data unless you explicitly grant us access.

How much help can I get?

Within reasonable use limits, we're very happy to help explain your bill, opportunities for cost savings – and to action them. The same applies to any security issues our monitoring detects.

Will this impact my AWS relationship?

No. Your AWS Account Manager and team will remain in place, and incentivised in the same ways to help you. Any additional terms, such as private pricing agreements remain in place.

I have existing AWS accounts, how does the transfer work?

Your existing accounts will be promptly linked to a D55 master account for consolidated billing, without loss of service - this is a "back end" change, rather than a migration of any kind. If the root credentials for your accounts are held by another partner, then a simple template agreement is processed in order to transfer accounts to D55's management. We initiate this standard process on request.
