

# AMPATH LABORATORIES MEDICAL GENETICS INTERNSHIP TRAINING

Designed to equip aspiring medical scientists with the skills and experience required for HPCSA registration.

During our **2-year internship**, candidates will rotate through all four specialised genetics divisions, gaining hands-on experience in a wide range of diagnostic techniques, including molecular, cytogenetic, and biochemical methods.

Interns will also complete a mini research project within one of the divisions, providing an opportunity to apply their knowledge in a focused area of interest. This project will form part of the final portfolio submitted to the HPCSA for assessment toward qualification as a medical scientist in genetics.
