Our new monthly webinar is meant to give planning teams an overview of what's possible with AI today, and to offer space for open questions and discussion. In each session, we will provide step-by-step walkthroughs of how AI can be used to speed up the work, handle daily production scheduling tasks more easily and react to disruptions in a fast and efficient way.

In each session, we will show:

- How planning teams can use AI to create and adjust production schedules in seconds when priorities or conditions shift
- How Al-supported planning helps uncover hidden capacity, without investing or hiring
- What an Al-based planning board looks like, and how it helps with daily scheduling tasks
- Plus: an open Q&A bring your questions and challenges!

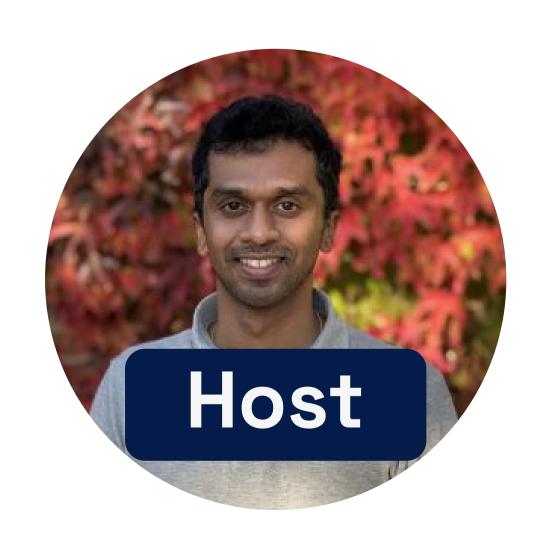

Who Shouldn't Miss This

Our webinars are especially valuable for:

- **Production Planners** dealing with constant schedule change or simply looking for the latest tools to facilitate day to day tasks
- **Operations Managers** managing constant schedule pressure, shifting priorities, and limited resources
- Plant Managers focused on efficient production, consistent delivery, and smart resource use

Hosts and Speakers

We regularly invite guest speakers to share practical insights and lessons from the field. Speaker announcements are shared via our monthly newsletter — **subscribe to stay in the loop!**
