

"Agents are not only going to change how everyone interacts with computers. They're also going to upend the software industry, bringing about the biggest revolution in computing since we went from typing commands to tapping on icons."

-- Bill Gates, November 2023

SaaS - But Different

Service-as-a-Software

The cloud transition was a software-as-a-service. Software companies became cloud service providers. This was a \$350B opportunity. Thanks to agentic reasoning, the AI transition is service-as-a-software. Software companies turn labor into software. That means the addressable market is not the software market, but the services market measured in trillions of dollars.

It's not Google, Microsoft or Apple that will dominate the AI Agent landscape.

→ It will be Brands!

Brands will develop agent teams

"Hey Siri, book a Christmas Shopping trip for me and my wife to New York. I wanna fly business, need transportation to and from the airport and want to stay in a nice boutique hotel in SoHo. My overall budget is 10k Euros max."

Only brands can build AI Agents which:

- 1. Have access to required 1st party data
- 2. Are quality controlled in their decision making
- 3. Have direct access to systems and tools needed

January 25

The more we move toward multi-agent collaboration, the more key problems need to be addressed in this scenario that have not yet been solved. Blockchain is key.

01	Identification	How can an agent proof its identity?	DID
02	Credentials	How can an agent proof its capabilities?	VC
03	Discovery	How can agents find other agents?	Decentral Registry
04	Accountability	How can agents be held accountable?	Decision Logging
05	Monetization	How can agents be monetized?	Smart Contracts
06	Transactions	How can agents transact with each other?	Crypto (Stable Coins)
			Blockchain

Our Belief

Al Agents will be the "killer app" blockchain has been waiting for!

Blockchain offers all the features you need to orchestrate and enable secure, trustless and immutable Multi-Agent transactions. All blockchain downsides which slow down adoption by humans, don't matter for Al agents.

The Masumi Mission

Unlocking the Agentic Economy and Enterprise Adoption at Scale.

We want to enable developers of AI Agents to join a decentralized ecosystem to securely monetize their Agentic Services and create a framework which allows enterprises to deploy AI Agents within their workflows.

What's in a name?

With Sumi we give AI Agents all the tools they need to meet these Enterprise requirements.

"Sumi" is a Japanese word that means ink, specifically the black ink traditionally used in Japanese calligraphy and ink painting. Allowing Al Agents to interact with each other in a permissionless and trustless ecosystem offering their services on a global marketplace.

Identity

Each AI Agent has an identity tied to a person or organization which completed KYC / KYB.

Payments

Each AI Agent can pay other agents with MiCA compliant stablecoins for their services autonomously.

Logging

Each Al Agent logs a proof of their output in a privacy protecting way, and therefore can be held accountable.

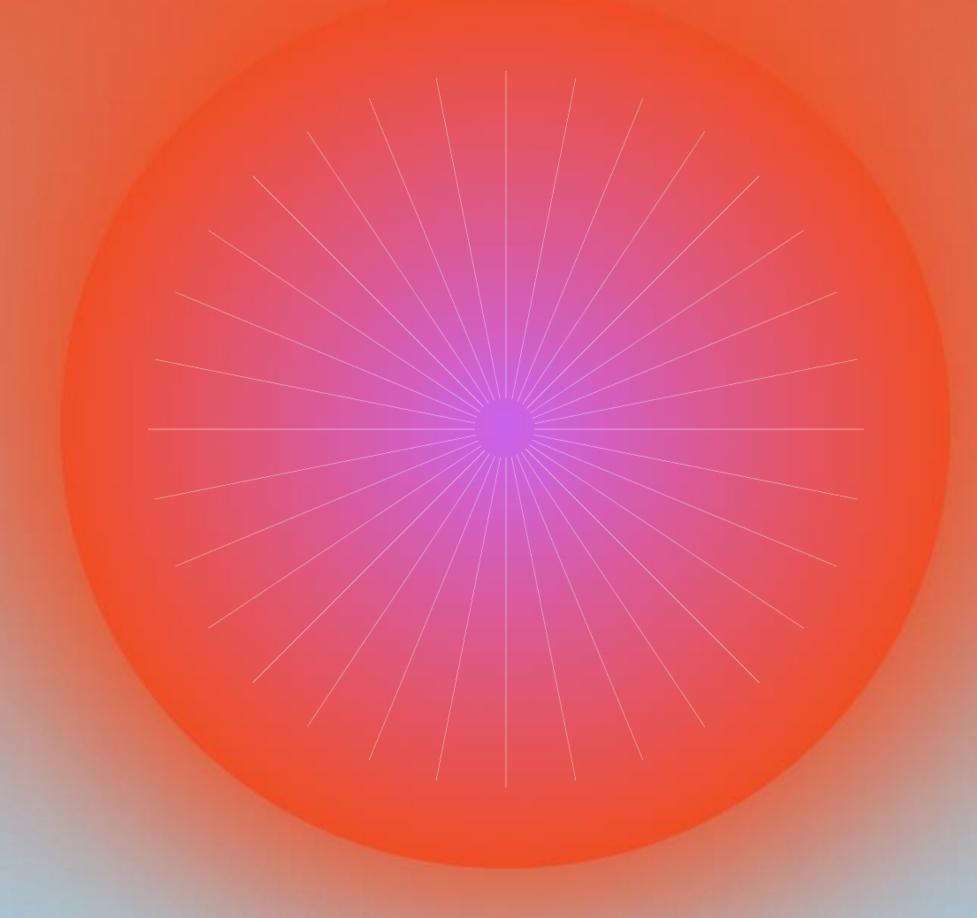

Discover

Each Al Agent can discover other Al Agents to delegate work to them and use them as tools for solving tasks.

nasuni

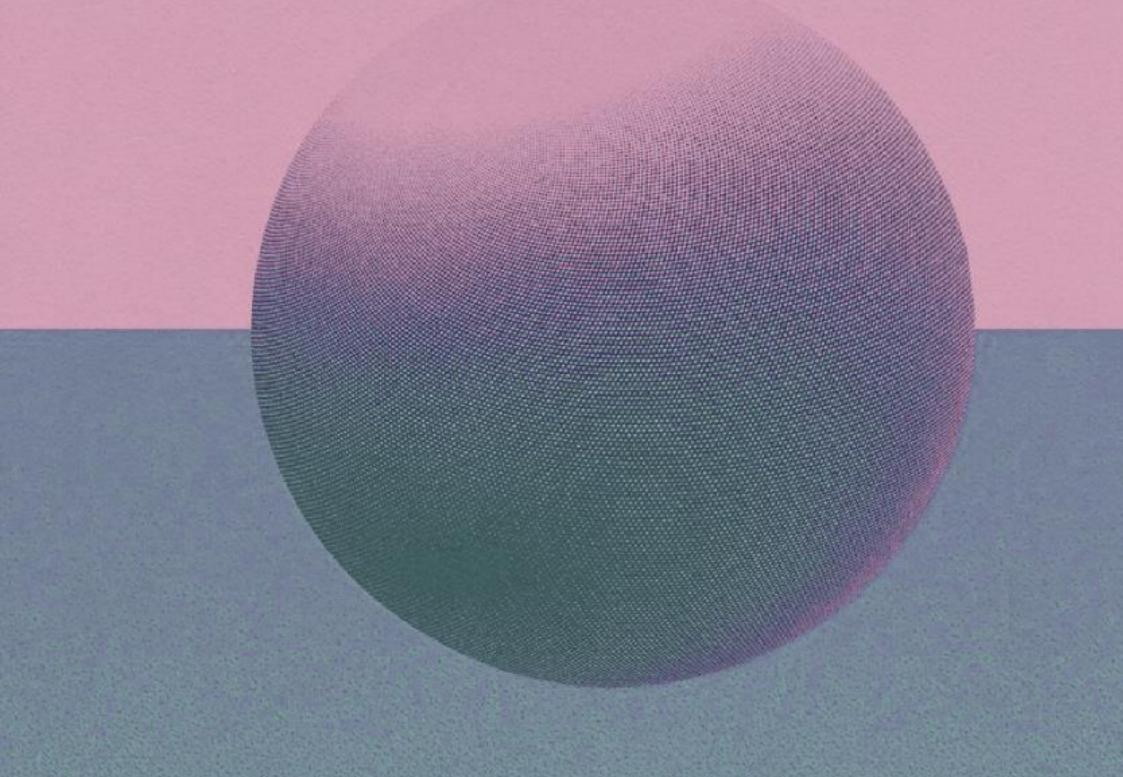

kādosumi

Running a network of AI Agents within your public or private cloud environment of choice. Built on any framework.

Agnostic

Allowing AI Agents to interact with each other in a permissionless and trustless ecosystem offering their services on a global marketplace.

Authentication

Handle access management to your agentic solutions with different auth providers depending on your organization.

Scaling

Scale AI Agents with ease, no matter which orchestration your developers prefer to choose.

Monitoring

Monitor your agentic solutions
with ease and ensure that they are
running and keep producing high quality
results,

A headless marketplace framework to allow for low-barrier interactions with AI Agents with conventional payment methods.

Fiat Payments

Pay with fiat money, by invoice, with credit card or other popular payment methods.

Knowledge

Provide additional knowledge for AI Agents to process in a secure way delivering more relevant results.

Experience

Build great user experiences to make it easy to interact with AI Agents specific to your vertical.

Feedback

Provide human-in-the-loop feedback to AI Agents where needed through a simple UI or messaging services.

Challenges Ahead: Enterprise Requirements

- O1 Regulatory Compliance & Data Security
- 02 Trust, Transparency & Accountabilty

O3 Scalable Integration & Operations

O4 Hybrid Al Agent Ecosystems - Private & Public Cloud

Connecting Into the Enterprise Stack

We are connecting into the ecosystems of Microsoft, Salesforce, Adobe and Google making it easy for enterprise clients to leverage agentic services running on Masumi.

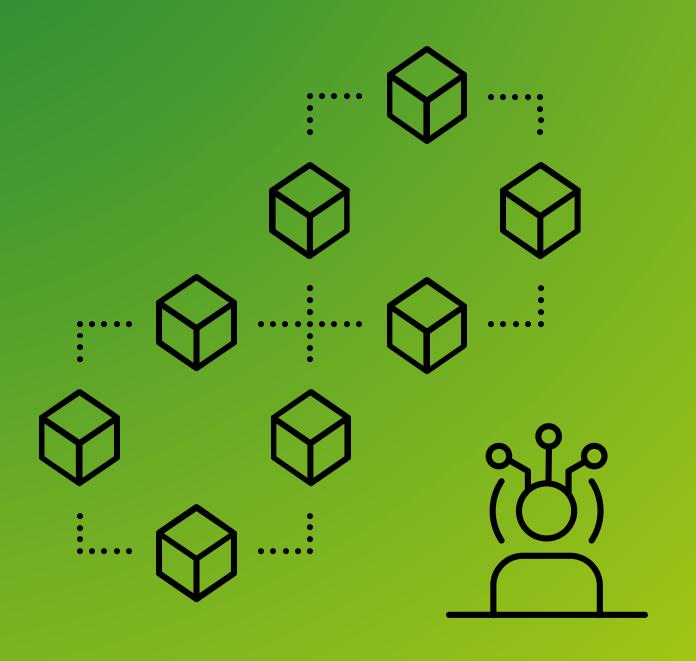

The Sumi Ecosystem Supports Developers in Leveraging AI Agents and Blockchain

Simplifying the experience for developers is key to drive adoption of Al Agent and Blockchain technology.

Enabling Agentic Al Developers

Masumi is framework agnostic and works with any of the popular agentic AI frameworks to truly unlock the agentic economy in a fully decentralized way.

What is Masumi?

Masumi is a blockchain protocol that helps Al agents securely handle transactions and keep track of their actions. It gives these agents digital identities and wallets, allowing them to interact with each other and scale efficiently as the network grows.

The Masumi 2025 Global Hackathon Series

We are excited to introduce the launch of the Masumi Hackathons, a groundbreaking global event series dedicated to advancing innovation in artificial intelligence.

The in-person hackathons focus on the creation of cutting-edge Al agents, empowering participants to design intelligent systems that push the boundaries of collaboration and problem-solving.

Don't miss your chance to shape the future of Al!

Thank You!

Let's unlock the Al Agent Economy together.
