The power cost adjustment ("PCA") is to be computed each month using the actual delivered cost of energy for the most recent three-month period divided by the actual number of kilowatt-hours used for the same three-month period, subtracting the base power cost and multiplying the result by the compensation factor for distribution system losses and energy furnished free by the municipal electric utility to the City of Baldwin City.

$$\text{PCA} = [(\text{Power Cost} / \text{kWh Used}) - \text{Base Power Cost}] \times \text{Compensation Factor}$$

For purposes of this formula, the following applies:

PCA = Power Cost Adjustment stated as a cost per kWh, rounded to the nearest \$0.0001. The PCA could result in an incremental charge or a credit for the month

Power Cost = the most recent three-month actual cost of purchased power and fuel for power plant generation.

kWh Used = the most recent three-month actual kilowatt hours used.

Base Power Cost = budgeted annual power cost divided by the budgeted annual kWh.

Compensation Factor = 1.1111 and is a multiplier used to compensate the utility for accounted losses of energy given away at no charge such as street lighting, line losses both Internal (distribution) and External (transmission), and theft.
