

Navigating Cybersuite X Modules

My Home Module

The **My Home** module in **Cybersuite X** allows you to manage your smart thermostat directly from the app, giving you control over your unit's **temperature settings** for comfort and energy efficiency.

Steps to Access and Adjust Your Thermostat

1. **Open the Cybersuite X App** and **tap** on the **"My Home"** module.
2. If your building supports smart thermostat integration, you will see a thermostat control panel.
3. **Select a device.**
4. **View Current Temperature** - The display will show the **current** indoor temperature and **set** temperature.
5. **Adjust the Temperature** - Use the plus (+) and minus (-) buttons or a slider (if available) to increase or decrease the temperature.
6. **Switch Between Modes** - Depending on your thermostat, you may have options to change:
 - **Heating Mode** (*warms up the unit*).
 - **Cooling Mode** (*lowers the temperature*).
 - **Auto Mode** (*maintains a balanced temperature*).
 - **Fan Settings** (*adjust fan speed or toggle it on/off*).
7. **Confirm Your Changes** - The thermostat will update in real time to reflect your settings.
