# HOW TO ACTUALLY USE CANDLESTICKS

After 25 years and 7,000+ students, two rules run everything.

---

# 1

## READ PATTERNS ON THE BIG PICTURE

Named candlestick patterns belong on the daily chart.

One-minute and five-minute candle reading is noise.

Intraday you read structure: pullback into the 9/20 EMA

Bone Zone, green candle trigger. Not pattern hunting.

---

# 2

## A CANDLE IS AN IDEA, NOT A SIGNAL

A pattern does not mean act. It means add to the watchlist.

The candle only matters inside context: trend, key level, volume, overbought or oversold. Context makes the trade.

The candle is the heads-up. The follow-through is the money.

---

## THE STACK THAT MAKES THEM WORK

Support & resistance + trend / moving averages

Volume confirmation + confluence (VWAP, Bollinger, levels)

Pattern is ~20% of the edge. Context is the other 80%.
